The Secret American Mathematical Soc.
Author and veteran teacher Derek Stolp has come to the conclusion that learning mathematics is of no real consequence for the vast majority of our children. This stance flies in the face of the conventional wisdom held among political leaders, business people, teachers, and parents that mathematics is an essential subject for all children to study well into their high school years. In Mathematics Miseducation, Stolp argues that mathematics, as currently taught, does not justify inclusion in the curriculum and he suggests practical changes that can be implemented within a traditional school environment to resuscitate mathematics education. In this book, the author demonstrates that our beliefs about what children need and what motivates them to learn promote practices that are counterproductive, and that these practices ultimately corrupt students' own healthy motivations. Stolp contends that there is too much emphasis upon academics in our schools, and that other important dimensions of education, such as the social, emotional, and moral

development of our children, are ignored. Includes: ·Progressive and practical alternatives to the traditional methods of teaching ·Research and examples citing ways of bringing the discipline to life In seamlessly weaving theory and practice, Derek Stolp provides a narrative that is accessible to any adult concerned about what our children are learning in mathematics.

This unique new perspective and method for teaching English Language Learners is the proven result of the author's community organizing career and his successful career in the classroom.

Written by an award-winning practitioner, *English Language Learners: Teaching Strategies that Work* offers educators a five-step methodology for teaching this burgeoning population. Rather than viewing these students

through the typical lens of "deficits" they might have, the process helps educators recognize and use the assets ELLs bring to the classroom. The five principles around which the process revolves are: building relationships, accessing prior knowledge through student stories, developing student leadership, learning by doing, and reflection. The book shows how these ideas can be used in all subject areas to help ELLs master both content and language using "high-order" thinking skills. In addition to providing detailed lessons, the book shares a framework teachers can use to create their own lessons, and it shows how to take advantage of technology and games as teaching tools. References to extensive research studies are included to provide evidence of effectiveness, and each lesson is linked to state standards in English Language development.

Publishers Weekly bestseller · A joyful and accessible homeschool guide to making learning a part of everyday life
Parents who are deeply invested in their children's education can be hard on themselves and their kids. When exhausted parents are living the day-to-day grind, it can seem impossible to muster enough energy to make learning fun or interesting. How do parents nurture a love of learning amid childhood chaos, parental self-doubt, the flu, and state academic standards? In this book, Julie Bogart distills decades of experience--homeschooling her five now grown children, developing curricula, and training homeschooling families around the world--to show parents how to make education an exciting, even enchanting, experience for their kids, whether they're in elementary or high school. Enchantment is about ease, not

striving. Bogart shows parents how to make room for surprise, mystery, risk, and adventure in their family's routine, so they can create an environment that naturally moves learning forward. If a child wants to pick up a new hobby or explore a subject area that the parent knows little about, it's easy to simply say "no" to end the discussion and the parental discomfort, while dousing their child's curious spark. Bogart gently invites parents to model brave learning for their kids so they, too, can approach life with curiosity, joy, and the courage to take learning risks.
