"In the wake of a fever that decimated the earth's population--killing women and children and making childbirth deadly for the mother and infant--the midwife must pick her way through the bones of the world she once knew to find her place in this dangerous new one. Gone are the

pillars of civilization. All that remains is power--and the strong who possess it. A few women like her survived, though they are scarce. Even fewer are safe from the clans of men, who, driven by fear, seek to control those remaining"--Back cover.

The amazing tale of "County" is the story of one of America's oldest and most unusual urban hospitals. From its inception as a "poor house" dispensing free medical care to indigents, Chicago's Cook County Hospital has been renowned as a teaching hospital and the healthcare provider of

last resort for the city's uninsured. Ansell covers more than thirty years of its history, beginning in the late 1970s when the author began his internship, to the "Final Rounds" when the enormous iconic Victorian hospital building was replaced. Ansell writes of the hundreds of doctors who underwent rigorous training with him. He writes of politics, from contentious union strikes to battles against "patient dumping," and public health, depicting the AIDS crisis and the Out of Printening of County's HIV/AIDS clinic, the first in the city. And finally it is a coming-of-age story for a young doctor set against a backdrOut

of Print of race, segregation, and poverty. This is a riveting account.

This book is a handy, readable manual, which deals with the practical problems students face when writing their college admission essays.

My Own Country American Psychiatric Pub  
The chilling tome that launched an entire genre of books about the often gruesome but always tragic ways people have died in our national parks, this updated edition of the classic includes calamities in Yellowstone from the past sixteen years, including the infamous grizzly bear attacks in the summer of 2011 as well as a fatal hot springs accident in 2000. In these accounts, written with sensitivity as cautionary tales about what to do and what not to do in one of our wildest national parks, Whittlesey recounts deaths ranging from tragedy to folly—from being caught in a freak avalanche to the goring of a photographer who just got a little too close to a bison. Armchair travelers and park visitors alike will be fascinated by this important book detailing the dangers awaiting in our first national park.

The memoir and first book from the author of the beloved New York Times bestseller *Cutting for Stone*. Nestled in the Smoky Mountains of eastern Tennessee, the town of Johnson City had always seemed exempt from the anxieties of modern American life. But when the local hospital treated its first AIDS patient, a crisis that had once seemed an “urban problem” had arrived in the town to stay. Working in Johnson City was Abraham Verghese, a young Indian doctor specializing in infectious diseases. Dr. Verghese became by necessity the local AIDS expert, soon besieged by a shocking number of male and female patients whose stories came to occupy his mind, and even take over his life. Verghese brought a singular perspective to Johnson City: as a doctor unique in his abilities; as an outsider who could talk to people suspicious of local practitioners; above all, as a writer of grace and compassion who saw that what was happening in this conservative community was both a medical and a spiritual emergency. Out of his experience comes a startling but ultimately uplifting

portrait of the American heartland as it confronts—and surmounts—its deepest prejudices and fears.

A scorchingly frank look at how doctors are made, bringing readers into the critical care unit to see one burgeoning physician's journey from ineptitude to competence. In medical school, Matt McCarthy dreamed of being a different kind of doctor—the sort of mythical, unflappable physician who could reach unreachable patients. But when a new admission to the critical care unit almost died his first night on call, he found himself scrambling. Visions of mastery quickly gave way to hopes of simply surviving hospital life, where confidence was hard to come by and no amount of med school training could dispel the terror of facing actual patients. This funny, candid memoir of McCarthy's intern year at a New York hospital provides a scorchingly frank look at how doctors are made, taking readers into patients' rooms and doctors' conferences to witness a physician's journey from ineptitude to competence. McCarthy's one stroke of luck paired him with a brilliant second-year

adviser he called “Baio” (owing to his resemblance to the Charles in Charge star), who proved to be a remarkable teacher with a wicked sense of humor. McCarthy would learn even more from the people he cared for, including a man named Benny, who was living in the hospital for months at a time awaiting a heart transplant. But no teacher could help McCarthy when an accident put his own health at risk, and showed him all too painfully the thin line between doctor and patient. *The Real Doctor Will See You Shortly* offers a window on to hospital life that dispenses with sanctimony and self-seriousness while emphasizing the black-comic paradox of becoming a doctor: How do you learn to save lives in a job where there is no practice?

Finding all the information necessary to treat or meet the nutritional requirements of patients who are severely ill or establish new protocols has historically been problematic. This is addressed in *Diet and Nutrition in Critical Care*. This major reference work encapsulates the latest treatments and procedures to meet the dietary and nutritional needs of the critically ill. Where evidence is available this is presented. However, where evidence is absent, the authors highlight this and provide guidance based on their analysis of other available data and their clinical experience. *Diet and Nutrition in Critical Care* is a three volume set which addresses the needs of all those concerned with diet and nutrition in the critically ill and covers General Aspects, Enteral Aspects, and Parenteral Aspects. Each volume is stand alone and is further divided into separate sections. The Sections in the General Aspects are: General conditions in the severely ill General metabolic effects and treatments Assessment protocols General nutritional aspects Specific nutrients Adverse aspects

The next two volumes *Enteral Aspects* and *Parenteral Aspects* contain the following sections: General aspects and methods Specific nutrients Specific conditions Adverse aspects and outcomes Comparisons or dual parenteral and enteral support or transitions Preclinical studies The authors recognise the limitations in simplistic divisions and there is always difficulty in categorising treatment regimens. For example, some regimens involve transitions from one feeding protocol to another or the development of co-morbid conditions and in some cases enteral support may be supplemented with parenteral support. This complexity however, is addressed by the excellent indexing system. Contributors are authors of international and national standing, leaders in the field and trendsetters. Emerging fields of science and important discoveries relating to artificial support will also be incorporated into *Diet and Nutrition in Critical Care*. This volume represents a one stop shop of material related to enteral and parenteral support and is essential reading for those specialising in intensive and critical care, dietitians, nutritionists,

gastroenterologists, cardiologists, pharmacologists, health care professionals, research scientists, molecular or cellular biochemists, general practitioners as well as those interested in diet and nutrition in general.

Standing in the trauma room of an emergency department is like standing at ground zero of a nuclear reaction, only it's not radiation that is released-but stories. Stories that are told and retold, sometimes just until the end of the shift, but sometimes for decades. A survivor of domestic violence makes it to the hospital but cannot trust anyone. An anonymous man passes away after being taken to the emergency room, and no one can identify him. The spouse of a cancer patient must decide whether to force her to undergo chemotherapy or to let her pass away in peace. These stories-and all the rest in People of the ER-grapple with what it means to be human in the face of trauma and death. Written by the author of Trauma Room Two, People of the ER, delves deeper into the lives of the patients and staff that work in a small, rural

emergency room.

For patients and their loved ones, no care decisions are more profound than those made near the end of life. Unfortunately, the experience of dying in the United States is often characterized by fragmented care, inadequate treatment of distressing symptoms, frequent transitions among care settings, and enormous care responsibilities for families. According to this report, the current health care system of rendering more intensive services than are necessary and desired by patients, and the lack of coordination among programs increases risks to patients and creates avoidable burdens on them and their families. Dying in America is a study of the current state of health care for persons of all ages who are nearing the end of life. Death is not a strictly medical event. Ideally, health care for those nearing the end of life harmonizes with social, psychological, and spiritual support. All people with advanced illnesses who may be approaching the end of life are entitled to access to high-quality, compassionate, evidence-based care, consistent with their wishes. Dying in

America evaluates strategies to integrate care into a person- and family-centered, team-based framework, and makes recommendations to create a system that coordinates care and supports and respects the choices of patients and their families. The findings and recommendations of this report will address the needs of patients and their families and assist policy makers, clinicians and their educational and credentialing bodies, leaders of health care delivery and financing organizations, researchers, public and private funders, religious and community leaders, advocates of better care, journalists, and the public to provide the best care possible for people nearing the end of life.

NEW YORK TIMES BESTSELLER • The award-winning book that inspired an Apple Original series from Apple TV+ • A landmark investigation of patient deaths at a New Orleans hospital ravaged by Hurricane Katrina—and the suspenseful portrayal of the quest for truth and justice—from a Pulitzer Prize-winning physician and reporter “An amazing tale, as inexorable as a Greek tragedy and as gripping as a whodunit.”—Dallas Morning News After Hurricane Katrina struck and power failed, amid rising floodwaters and heat, exhausted staff at Memorial Medical Center designated certain patients last for rescue. Months later, a doctor and two nurses were arrested and accused of injecting some of those patients with life-ending drugs. *Five Days at Memorial*, the culmination of six years of reporting by Pulitzer Prize winner Sheri Fink, unspools the mystery, bringing us inside a hospital fighting for its life and into the most charged questions in health care: which patients should be prioritized, and can health care professionals ever be excused for hastening death? Transforming our understanding of human nature in crisis, *Five Days at Memorial* exposes the hidden

dilemmas of end-of-life care and reveals how ill-prepared we are for large-scale disasters—and how we can do better. Since the publication of the Institute of Medicine (IOM) report Clinical Practice Guidelines We Can Trust in 2011, there has been an increasing emphasis on assuring that clinical practice guidelines are trustworthy, developed in a transparent fashion, and based on a systematic review of the available research evidence. To align with the IOM recommendations and to meet the new

requirements for inclusion of a guideline in the National Guidelines Clearinghouse of the Agency for Healthcare Research and Quality (AHRQ), American Psychiatric Association (APA) has adopted a new process for practice guideline development. Under this new process APA's practice guidelines also seek to provide better clinical utility and usability. Rather than a broad overview of treatment for a disorder, new practice guidelines focus on a set of discrete clinical questions of relevance to an overarching subject area. A systematic review of evidence is conducted to address these clinical questions and involves a detailed assessment of individual studies. The quality of the overall body of evidence is also rated and is summarized in the practice guideline. With the new process, recommendations are determined by weighing potential benefits and harms of an intervention in a specific clinical context. Clear, concise, and actionable recommendation statements help clinicians to incorporate recommendations into clinical practice, with the goal of improving quality of care. The new practice guideline format is also designed

to be more user friendly by dividing information into modules on specific clinical questions. Each module has a consistent organization, which will assist users in finding clinically useful and relevant information quickly and easily. This new edition of the practice guidelines on psychiatric evaluation for adults is the first set of the APA's guidelines developed under the new guideline development process. These guidelines address the following nine topics, in the context of an initial psychiatric evaluation: review of psychiatric symptoms, trauma history, and treatment history; substance use assessment; assessment of suicide risk; assessment for risk of aggressive behaviors; assessment of cultural factors; assessment of medical health; quantitative assessment; involvement of the patient in treatment decision making; and documentation of the psychiatric evaluation. Each guideline recommends or suggests topics to include during an initial psychiatric evaluation. Findings from an expert opinion survey have also been taken into consideration in making recommendations or suggestions. In addition to reviewing the available

evidence on psychiatry evaluation, each guideline also provides guidance to clinicians on implementing these recommendations to enhance patient care.

Born in poverty in 19th century New York City, Mike Barnes rose to become America's premiere 20th century American show fair impresario, who embodied the Irving Berlin lyric, "There's no business like show business." For four decades, he presented dramatic spectacles worthy of Cecil B. DeMille, musical and dancing revues that rivaled anything by Busby Berkeley, animal acts, daredevil wing walkers, human cannonballs, flagpole sitters and auto demolitions. He assembled and directed these acts, entertaining millions across the United States, even during times of depression and world war. His influence on outdoor lighting and sound system presentation is still felt today in 21st century outdoor performances. Besides a snapshot of midcentury America, America's State Fair Impresario: The Life & Times of Mike Barnes is the story of a

modest man who was a brilliant showman, shrewd businessman, philanthropist, and exemplary family man. In short, a legendary American.

*God in the ICU* Simon and Schuster  
Drug overdose, driven largely by overdose related to the use of opioids, is now the leading cause of unintentional injury death in the United States. The ongoing opioid crisis lies at the intersection of two public health challenges: reducing the burden of suffering from pain and containing the rising toll of the harms that can arise from the use of opioid medications. Chronic pain and opioid use disorder both represent complex human conditions affecting millions of Americans and causing untold disability and loss of function. In the context of the growing opioid problem, the U.S. Food and Drug Administration (FDA) launched an Opioids Action Plan in early 2016. As part of this plan, the FDA asked the National Academies of Sciences, Engineering, and Medicine to convene a committee to update the state of the science on pain research, care, and education and to identify actions the FDA and others can take to respond to the opioid epidemic,

with a particular focus on informing FDA's development of a formal method for incorporating individual and societal considerations into its risk-benefit framework for opioid approval and monitoring.

This collection of true narratives reflects the dynamism and diversity of nurses, who provide the first vital line of patient care. Here, nurses remember their first "sticks," first births, and first deaths, and reflect on what gets them through long, demanding shifts, and keeps them in the profession. The stories reveal many voices from nurses at different stages of their careers: One nurse-in-training longs to be trusted with more "important" procedures, while another questions her ability to care for nursing home residents. An efficient young emergency room nurse finds his life and career irrevocably changed by a car accident. A nurse practitioner wonders whether she has violated professional boundaries in her care for a homeless man with AIDS, and a home care case manager is the sole attendee at a funeral for one of her patients. What connects these stories is the passion and strength of the writers,

who struggle against burnout and bureaucracy to serve their patients with skill, empathy, and strength.

In May 1971, *Look* magazine featured an article entitled "Chicago's Cook County Hospital: A Terrible Place." The article provided an in-depth look at the largest public hospital in the country, one located on Chicago's dangerous gang-controlled and drug-infested West Side. Months later, the author, then a naive suburban teen, and one hundred other nursing students, began their training there, despite newspaper articles that warned that the hospital might close any day. At 'the

County,' where nurse duties included swatting flies in the OR and delousing patients, both nurses and doctors were expected to provide care under the most desperate of circumstances. *Cooked* provides an inside look at the 2,000-bed ghetto hospital, often referred to as a "19th-century sick house," that provided health care to millions of Chicago's poor.
