**IAS Prelims 2017 A Complete Guide** Elsevier

This edited book is a comprehensive resource for understanding the history as well as the current status of educational practices in Singapore. It is a one-stop reference guide to education and educational issues/concerns here. There are three sections: Part 1 provides a sectorial overview of how education has been organized in this country such as preschool, special needs, primary and secondary, and adult education divisions. In Part 2, contributors critically delve into issues and policies that are pertinent to understanding education here such as underachievement, leadership, language education, assessment, and meritocracy to question what Part 1 might have taken for granted. Part 3 contains the largest number of contributors because it offers a scholarly examination into specific subject histories. This section stands out because of the comparative rarity of its subject matter (history of Physical Education, Art, Music, Geography Education, etc.) in Singapore.

Economic and Social Geography reviews developments in the study of economic and social geography and brings together in a single volume work which is dispersed in many specialist textbooks. An attempt has been made to achieve a balance between oversimplification and over-elaboration, and to present essential concepts in a clear, concise manner. The book contains 25 chapters organized into five parts. Part One deals with the study of economic and social geography, including approaches to the study of human geography and environmental perception and behavior. Part Two on

population geography covers topics such as population geography, population change, and population growth. Part Three on economic geography includes discussions of transportation, agriculture, and mineral resources. Part Four on settlement geography examines urbanization, the internal structure of towns and cities, and rural settlement. Part Five is devoted to urban and rural planning, problems of economic development, and resources. This book, together with its companion volume, Physical Geography Made Simple, should be of value to a variety of people. First, to those who are coming to academic geography for the first time, especially to those studying for GCE Advanced Level or ONC/OND examinations. It should also provide a concise introduction to first-year courses in further and higher education, including degree courses with a geography component, HNC/HND, and Certificate in Education courses.

In addition, the evolution of plants and animals, especially mammals and dinosaurs, is well preserved in the region, which also probably has the best record of the origin of modern man. This book provides a fascinating insight into that remarkable history: how southern Africa, and to some extent the world, came to be the way it is - how its mineral deposits formed, its life evolved and its landscape was shaped. Along the way readers will be enthralled by accounts of the Big Bang that marked the beginning of time and matter, by drifting and colliding continents, folding and fracturing of rocks, meteors colliding with the Earth, the time when the Earth froze over, volcanic eruptions and the start of life. Anyone interested in the landscape and ecosystems in which we live will be intrigued to discover how our natural landmarks were formed, from the deserts of Namibia to the mountains of the Western Cape or Mpumalanga. Why is South Africa so rich in minerals? How did glacial deposits come to be found in the Karoo? Why did dinosaurs become extinct? How did mammals develop from reptiles? How closely related are we to the apes? The answers to many such questions are found in this lavishly illustrated volume. The authors also suggest how we can learn from the past in order to anticipate the future - for instance, to be able to predict earthquakes, deal with volcanic eruptions and meet the challenges of global climate change.
