Mystery of the Periodic Table Princeton Review

93 short poems that teach about the elements of the periodic table. Indulge your love of the periodic table with this collection of poems and fun facts about the chemical elements that make up our world. From arsenic to zirconium, this book describes the characteristics, history, and quirks of each element. The poems are a launching point for a guided tour of the elements filled with fascinating scientific trivia. For instance: Antimony, used to treat constipation in the Middle Ages, may have killed Mozart. There's arsenic in your prawns! (But don't worry, it won't harm you.) Erbium is used to "dope" optical fiber amplifiers that make your YouTube videos download faster. Iridium was key to the meteor theory of why dinosaurs went extinct. You'll find potassium in both bananas and gunpowder. Sulfur plays a role in whether your hair is curly or straight. Expand your library of scientific literature with this playful and poetic romp through the periodic table.

A brilliant coloring book to familiarize children up to middle school with the Primary (first 5 rows) elements in the Periodic Table. Based on solid, proven concepts blending data with pictures with hands on coloring, the information sticks. By creating a foundation that is applicable to all science ("Oh yes, Hydrogen, I remember coloring it, part of water, it is also used as a fuel") and creating enjoyable memories associated with the elements, science just feels easy and natural as they progress. These students will be interested in chemistry, engineering and

other technical areas and will understand why those are important because they have colored those elements and what those elements do in a non-threatening environment earlier in life. But we've been told parents really enjoy all the cool facts on each element too!
