Dosso Dossi has long been considered one of Renaissance Italy's most intriguing artists. Although a wealth of documents chronicles his life, he remains, in many ways, an enigma, and his art continues to be as elusive as it is compelling. In *Dosso's Fate*, leading scholars from a wide range of disciplines examine the social, intellectual, and historical contexts of his art, focusing on the development of new genres of painting, questions of style and chronology, the influence of courtly culture, and the work of his collaborators, as well as his visual and literary sources and his painting technique. The result is an important and original contribution not only to literature on Dosso Dossi but also to the study of cultural history in early modern Italy.

The COVID-19 pandemic is inflicting high and rising human costs worldwide, and the necessary protection measures are severely impacting economic activity. As a result of the pandemic, the global economy is projected to contract sharply by -3 percent in 2020, much worse than during the 2008-09 financial crisis. In a baseline scenario--which assumes that the pandemic fades in the second half of 2020 and containment efforts can be gradually unwound--the global economy is projected to grow by 5.8 percent in 2021 as economic activity normalizes, helped by policy support. The risks for even more severe outcomes, however, are substantial. Effective policies are essential to forestall the possibility of worse outcomes, and the necessary measures to reduce contagion and protect lives are an important investment in long-term human and economic health. Because the economic fallout is acute in specific sectors, policymakers will need to implement substantial targeted fiscal, monetary, and financial market measures to support affected households and businesses domestically. And internationally, strong multilateral cooperation is essential to overcome the effects of the pandemic, including to help financially constrained countries facing twin health and funding shocks, and for channeling aid to countries with weak health care systems.

The author presents new arguments which support the view that Paul, not Jesus, was the founder of Christianity. He argues that Jesus and also his immediate disciples James and Peter were life-long adherents of Pharisaic Judaism. Paul, however, was not, as he claimed, a native-born Jew of Pharisee upbringing, but came in fact from a Gentile background. He maintains that it was Paul alone who created a new religion by his vision of Jesus as a Divine

Saviour who died to save humanity. This concept, which went far beyond the messianic claims of Jesus, was an amalgamation of ideas derived from Hellenistic religion, especially from Gnosticism and the mystery cults. Paul played a devious and adventurous political game with Jesus' followers of the so-called Jerusalem Church, who eventually disowned him. The conclusions of this historical and psychological study will come as a shock to many readers, but it is nevertheless a book which cannot be ignored by anyone concerned with the foundations of our culture and society. -- Book jacket.

"Australia's unique biodiversity is under threat from a rapidly changing climate. The effects of climate change are already discernible at all levels of biodiversity - genes, species, communities and ecosystems. Many of Australia's most valued and iconic natural areas - the Great Barrier Reef, south-western Australia, the Kakadu wetlands and the Australian Alps - are

among the most vulnerable. But much more is at stake than saving iconic species or ecosystems. Australia's biodiversity is fundamental to the country's national identity, economy and quality of life. In the face of uncertainty about specific climate scenarios, ecological and management principles provide a sound basis for maximising opportunities for species to adapt, communities to reorganise and ecosystems to transform while maintaining basic functions critical to human society. This innovative approach to biodiversity conservation under a changing climate leads to new challenges for management, policy development and institutional design. This book explores these

challenges, building on a detailed analysis of the interactions between a changing climate and Australia's rich but threatened biodiversity. Australia's Biodiversity and Climate Change is an important reference for policy makers, researchers, educators, students, journalists, environmental and conservation NGOs, NRM managers, and private landholders with an interest in biodiversity conservation in a rapidly changing world."--Publisher.
