 The COVID-19 pandemic has brought
 into sharp focus the need for the
 collection of data. Such data cannot be
 collected or provided without medical
 informatics, documentation and health
 data management. Nor can health data
 be evaluated and converted into a useful
 tool for making the important decisions
 that affect us all without biometrics and
 epidemiology, bioinformatics and
 systems biology. This book presents full
 papers from GMDS & CEN-IBS 2020, the
 first joint online conference of the
 German Association of Medical
 Informatics, Biometry and Epidemiology
 (GMDS) and the Central European
 Network & the International Biometric
 Society (CEN-IBS), held online between 6
 and 11 September 2020. The title of the
 conference was Bringing Data to Life, a
 reference to the increasing amount of
 data in medical research which is
 inextricably related to the fast-

developing digitalization of the health
 system. Many challenges must be
 addressed in order to make use of and
 benefit from these increasing sources of
 data, and these can only be faced if all
 disciplines related to data science work
 together. The conference aimed to bring
 together the diverse disciplines within
 data science, including medical
 informatics, bioinformatics, biostatistics,
 epidemiology, public health and medical
 documentation. Topics covered in the
 book include central themes relevant to
 society in general and advances in data
 technology which support innovations in
 medical research in particular. The book
 brings together many topics related to
 the provision and analysis of data in
 medicine, and will be of interest to all
 those working in the field.

The COVID-19 pandemic upended the
 lives of many and taught us the critical
 importance of taking care of one's health
 and wellness. Technological advances,
 coupled with advances in healthcare,
 has enabled the widespread growth of a
 new area called mobile health or
 mHealth that has completely
 revolutionized how people envision
 healthcare today. Just as smartphones
 and tablet computers are rapidly
 becoming the dominant consumer
 computer platforms, mHealth technology
 is emerging as an integral part of
 consumer health and wellness
 management regimes. The aim of this
 book is to inform readers about the this
 relatively modern technology, from its
 history and evolution to the current
 state-of-the-art research developments
 and the underlying challenges related to
 privacy and security issues. The book's
 intended audience includes individuals

interested in learning about mHealth and its contemporary applications, from students to researchers and practitioners working in this field. Both undergraduate and graduate students enrolled in college-level healthcare courses will find this book to be an especially useful companion and will be able to discover and explore novel research directions that will further enrich the field.

The Apple Watch Series 5 combines all the features you could ever want from a wearable band. Every year, Apple has been adding necessary features to make the Apple watch better. The Series 2

came with the needed power for native apps. After that, Series 3 brought cellular connectivity and Series 4 had display pushed to full capacity. Series 5 allows for an always-on display. The watch is now a watch. If you own the Series 4, an always-on display may not be reason enough to upgrade. However, the Series 5 offers much more. Apple is not the first manufacturer to do this, but they might as well be the best. Monochrome veneer, secondary display layer—all these things are not there. You only get an existing watch face; always on. How does it work? With previous versions, the Apple Watch would go into sleep mode when you were not interacting with it. The same thing happens with the Apple Series 5.

It is widely accepted that the key to rising incomes for workers, for investors, and (indirectly) for welfare recipients is innovation. New ideas provide opportunities for investment in new products, new processes, and new markets. Exploitation of these opportunities by intrapreneurs and entrepreneurs gives rise to increases in labor productivity, which in turn lead to higher primary incomes for workers and investors and, via government redistributive mechanisms, larger transfers to welfare recipients. Since technology is the driver of innovation and the key to the subsequent economic and distributional benefits of this innovation, there is a need for researchers and businesspersons to have access to up-to-date information on emerging technologies and the business opportunities they provide.

Technological Breakthroughs and Future Business Opportunities in Education, Health, and Outer Space discusses the economic, social, and cultural benefits

that new technologies can provide in multidisciplinary industries with a unique emphasis on looking towards the impacts of these technologies across the next two decades. Within this theme, the book discusses the recent trends, future developments, and business opportunities surrounding new technologies including information technology and biotechnology. Additionally, the book investigates recent demands and disruptions in the health and education sectors as well as recent developments and forthcoming opportunities in the outer space sector and how newer technologies can enable and meet the growing demands of these industries. While covering all these technologies and their applications, this book is an ideal reference work for entrepreneurs and intrapreneurs, teachers, technologists, analysts, IT specialists, engineers, policymakers, medical professionals, government officials, space agencies, financial planners, public officials, and researchers and students working in areas that include but are not limited to technology, education, public health, medicine, business and management, aeronautics, and public policy.
