LAUREL DECKER

Natur und Museum Walter de Gruyter

ZELLULOID is dedicated to a particular genre of artistic film, in which the image is generated directly, by physically processing the film strip. Unlike other forms of experimental film, the film material is interpreted as if it were a canvas by using a diverse range of artistic processes: through painting, drawing, collage on the celluloid, scores and scratches in the photographic emulsion, chemical manipulation or the direct lighting of photo-sensitive media. This exhibition catalogue contains outstanding examples of 'films without a camera' and features some 20 international artists and filmmakers from the 1930s to the present day. Published on the occasion of the exhibition Zelluloid: Film ohne Kamera, June ndash; August 2010, Schirn Kunsthalle Frankfurt. English and German text.

[Goethe's Faust and the Divan of Ḥāfīz](#) Independently Published

So you think you're a Buddhist? Think again. Tibetan Buddhist master Dzongsar Jamyang Khyentse,

one of the most creative and innovative lamas teaching today, throws down the gauntlet to the Buddhist world, challenging common misconceptions, stereotypes, and fantasies. With wit and irony, Khysentse urges readers to move beyond the superficial trappings of Buddhism—beyond the romance with beads, incense, or exotic robes—straight to the heart of what the Buddha taught.

This book explores the poetic articulations of a shift from a transcendent to an immanent worldview, as reflected in the manner of evaluation of body and soul in Goethe's Faust and Ḥāfīz' Divan. Focusing on two lifeworks that illustrate their authors' respective intellectual histories, this cross-genre study goes beyond the textual confines of the two poets' Divans to compare important building blocks of their intellectual worlds.

Climatic Risk Atlas of European Butterflies Walter de Gruyter GmbH & Co KG

The four short works in Untimely Meditations were published by Nietzsche between 1873 and 1876. They deal with such broad topics as the relationship between popular and genuine culture, strategies for cultural reform, the task of philosophy, the nature of education, and the relationship between art, science and life. They also include Nietzsche's earliest statement of his own

understanding of human selfhood as a process of endlessly 'becoming who one is'. As Daniel Breazeale shows in his introduction to this new edition of R. J. Hollingdale's translation of the essays, these four early texts are key documents for understanding the development of Nietzsche's thought and clearly anticipate many of the themes of his later writings. Nietzsche himself always cherished his Untimely Meditations and believed that they provide valuable evidence of his 'becoming and self-overcoming' and constitute a 'public pledge' concerning his own distinctive task as a philosopher.

A space cruiser, in search of its sister ship, encounters beings descended from self-replicating machines. In the grand tradition of H. G. Wells and Jules Verne, Stanisław Lem's The Invincible tells the story of a space cruiser sent to an obscure planet to determine the fate of a sister spaceship whose communication with Earth has abruptly ceased. Landing on the planet Regis III, navigator Rohan and his crew discover a form of life that has apparently evolved from autonomous, self-replicating machines—perhaps the survivors of a “robot war.” Rohan and his men are forced to confront the classic quandary: what course of action can humanity take once it has reached the

limits of its knowledge? In *The Invincible*, Lem has his characters confront the inexplicable and the bizarre: the problem that lies just beyond analytical reach.

Spontanrealismus Springer Science & Business Media

This is the companion volume to the Eadweard Muybridge exhibition opening at Stanford, and is the first showing of the pioneering artist's work in 30 years. 195 halftones.

This dazzling survey of 16th-century Venetian painting captures the striking colors and revolutionary characteristics of one of art history's greatest chapters. It is hard to imagine more profoundly influential artists than the Venetian painters of the 16th century. Whether creating sweeping devotional altarpieces or intimate portraits, the Venetian painters changed the way artists employed color and composition. These defining qualities are on brilliant display in this book that covers fascinating aspects of the work of Titian, Veronese, Tintoretto, Lorenzo Lotto, Jacopo Bassano, and many others. More than one hundred paintings, drawings, and prints are reproduced in stunning detail. Side-by-side comparisons draw readers into the conversations between Venetian artists as they tackled similar subjects and vied for commissions. The book opens with fascinating essays about the history of 16th-century Venice, the Venetian School of painting, and the techniques of the Venetian masters. As beautiful as it is informative, this book features all of the excitement and splendor of one of the most prolific and important chapters in the history of European art.

Titian and the Renaissance in Venice Walter de Gruyter GmbH & Co KG

Intensive Interaction is an approach to teaching the fundamentals of communication to children and adults who have severe learning difficulties or autism, and who are still at an early stage of communication development. Its simplicity and effectiveness has been one of the major themes in the widespread practitioner dissemination that has taken place during the last twenty years.

Despite the human simplicity of the approach, intensive interaction relates to, or is influenced in practice by, a wide range of interconnecting theories and academic standpoints. With contributions from leading authorities, Dave Hewett provides a comprehensive and detailed description of the theoretical landscape of a now established methodology. The most prominent related theories and issues are reviewed, with *Intensive Interaction* set within their contexts. Issues covered include: - the approach within education and the curriculum - intensive interaction within adult services - effects on organisational change and development - neurology and learning outcomes - intensive Interaction and the Central Triad of autism - emotional learning and development outcomes - adoption of *Intensive Interaction* Providing a timely theoretical and academic overview to *Intensive Interaction* practice, this book marks a substantial theoretical waypoint to future development of interactive approaches generally. It is a vital resource of in-depth knowledge for anyone studying Special Educational Needs and Education. Dave Hewett is an independent educational consultant and has published widely on *Intensive Interaction* since his role in its development.

What is Abstraction? Cambridge University Press

A sampling of glass work by 196 artists from 28 countries.

Time Stands Still Lark Books

Sometime toward the middle of the twelfth century, it is supposed, an otherwise obscure figure, born a Jew in Cologne and later ordained as a priest in Cappenberg in Westphalia, wrote a Latin account of his conversion to Christianity. Known as the *Opusculum*, this book purportedly by "Herman, the former Jew" may well be the first autobiography to be written in the West after the

Confessions of Saint Augustine. It may also be something else entirely. In *The Conversion of Herman the Jew* the eminent French historian Jean-Claude Schmitt examines this singular text and the ways in which it has divided its readers. Where some have seen it as an authentic conversion narrative, others have asked whether it is not a complete fabrication forged by Christian clerics. For Schmitt the question is poorly posed. The work is at once true and fictional, and the search for its lone author—whether converted Jew or not—fruitless. Herman may well have existed and contributed to the writing of his life, but the *Opusculum* is a collective work, perhaps framed to meet a specific institutional agenda. With agility and erudition, Schmitt examines the text to explore its meaning within the society and culture of its period and its participation in both a Christian and Jewish imaginary. What can it tell us about autobiography and subjectivity, about the function of dreams and the legitimacy of religious images, about individual and collective conversion, and about names and identities? In *The Conversion of Herman the Jew* Schmitt masterfully seizes upon the debates surrounding the *Opusculum* (the text of which is newly translated for this volume) to ponder more fundamentally the ways in which historians think and write.

Farming for Health describes the use of farms, farm animals, plants and landscapes as a base for promoting human mental and physical health and social well-being. The book offers an overview of the development of 'Farming for Health' initiatives across Europe, resulting from changing paradigms in health care and the demand for new social and financial activities in agriculture and rural areas. The contributors are drawn from a range of countries and disciplines.

Intensive Interaction Lark Books

Climate change will cause Europe to lose much of its biodiversity as projected by a comprehensive study on future butterfly distribution. The Climatic Risk Atlas of European Butterflies predicts northward shifts in potential distribution area of many European butterfly species. As early warning indicators of environmental change, butterflies are a valuable tool to assess overall climate change impact and to provide some indication on the chances to come nearer to the target of halting the loss of biodiversity by 2010 set by the EU Heads of State in 2001. The Climatic Risk Atlas of European Butterflies is based on the work of scores of scientists from across Europe. They applied climate change models to data collected by tens of thousands of volunteers. The authors say that some climate change is now inevitable and that the extent of the losses will depend on the degree of that change and how we respond to the new threat. Butterflies have already suffered huge losses across Europe following decades of habitat loss and changing farming and forestry practices. As temperatures rise, majority of butterfly species will try to head north. This won't always be achievable. The forestry and farming changes mean that areas of suitable habitat are now often small and too far apart for butterflies to travel between them. The worst-case scenario scientists examined sees the average European temperature rise by 4.1°C by 2080. In that case over 95 per cent of the present land occupied by 70 different butterflies would become too warm for continued survival. The best case-scenario sees a 2.4°C temperature rise. Even this would mean that 50 per cent of the land occupied by 147 different butterflies would become too warm for them to continue to exist there. Many butterflies will largely disappear from where they are regularly seen now. The Small Tortoiseshell will become absent from a huge swathe of middle and southern Europe and will become restricted to northern Europe. Under the worst-case scenario, rare species like the Spanish Festoon *Zerynthia rumina* would experience a 97% loss from Spain and Southern France, and the Apollo *Parnassius apollo* would suffer a 76% loss from mountainous areas. Climate change is already having an impact on butterflies. Over 60 mobile species with widespread food-plants are known to have spread north in Europe over recent decades, including the Comma *Polygonia c-album*, which is spreading north in the UK at 10km per year. Other species have moved further up mountains. The chief author of *Climatic Atlas of European Butterflies* is Dr

Josef Settele from the Helmholtz Centre for Environmental Research (UFZ) in Germany. He said: "The Atlas shows for the first time how the majority of European butterflies might respond to climate change. Most species will have to shift their distribution radically to keep pace with the changes. The way butterflies change will indicate the possible response of many other insects, which collectively comprise over two-thirds of all species." Dr Martin Warren, Chairman of Butterfly Conservation Europe and one of the authors, said "Evidence points to an acceleration in climate change after 2050 unless there is a significant decrease in global CO2 emissions. This accelerated change would be the final nail in the coffin for many European species. We need to be ready for this worst-case scenario. We need place more emphasis on maintaining large, diverse populations on existing habitats while re-connecting habitats to allow species to move across the landscape. This means working closely with farmers and planners." Dr Ladislav Miko, Director of Nature Conservation at the EU Environment Directorate in Brussels, said: "We strongly welcome this important study which helps us understand how species might respond to climate change. The evidence points to a radical change in species' distribution, which we must plan for within future European policies. The results show the enormous scientific value of records from thousands of volunteers across Europe." Sebastian Winkler, Head of Countdown 2010, stated "The astounding outcomes of this study should remind world leaders once more that if immediate action is not taken, the 2010 biodiversity target will not be reached and biological diversity will continue to decline." The Climatic Risk Atlas of European Butterflies was written by researchers from across Europe under the EU Sixth Framework programme projects: ALARM (Assessing Large-scale Environmental Risks for biodiversity with tested Methods) www.alarmproject.net and MACIS (Minimisation of and Adaptation to Climate change Impacts on biodiversity) www.macis-project.net Contacts Josef Settele, Butterfly Conservation Europe & Helmholtz-Centre of Environmental Research - UFZ, Department of Community Ecology, Tel: xx 49 345 558 5320, Josef.Settele@ufz.de Martin Warren, Butterfly Conservation Europe & Butterfly Conservation (UK). The Ten Books of Architecture Rutgers University Press

This volume offers contributions from leading experts in the biology of chaetognaths, or arrow worms--voracious carnivores which are exceptionally abundant in all the seas of the world. Until now there has been a lack of easily accessible information on this group, despite the fact that their vast numbers very likely render chaetognaths of major ecological significance in marine planktonic communities. This work is the first comprehensive survey. It deals with all aspects of chaetognath biology, including much recent and unpublished work. Two chapters are devoted to taxonomic relationships, two chapters cover morphology and anatomy, four chapters are concerned with physiology and behavior, three are devoted to ecology, and one chapter provides detailed information about the techniques necessary for studying the organism. The book will interest all marine biologists and zoologists working on plankton, along with invertebrate biologists, systematists, and advanced students of marine biology. *Wörterbuch der europäischen Gartenkunst* Prestel Publishing Filmmaking in Germany and Austria has changed dramatically with digitalization and the use of video and the Internet. Introducing the work of filmmakers, this volume offers an assessments of the intent and effect of their productions, and describes overall trends.
