The field of anatomy is dynamic and fertile. The rapid advances in technology in the past few years have produced exciting opportunities in the teaching of gross anatomy such as 3D printing, virtual reality, augmented reality, digital anatomy models, portable ultrasound, and more. Pedagogical innovations such as gamification and the flipped classroom, among others, have also been developed and implemented. As a result, preparing anatomy teachers in the use of these new teaching tools and methods is very timely. The main aim of the second edition of Teaching Anatomy - A Practical Guide is to offer gross anatomy teachers the most up-to-date advice and guidance for anatomy teaching, utilizing pedagogical and technological innovations at the forefront of anatomy education in the five years since the publication of the first edition. This edition is structured according to the teaching and learning situations that gross anatomy teachers will find themselves in: large group setting, small group setting, gross anatomy laboratory, writing examination questions, designing anatomy curriculum, using anatomy teaching tools, or building up their scholarship of teaching and learning. Fully revised and updated, including fifteen new chapters discussing the latest advances, this second edition is an excellent resource for all instructors in gross anatomy.

Combining the latest developments and research discoveries, board-certified gastroenterologist and medical host on CNN and Fox News, Dr. Roshini Raj shows the ways in which the microbiome impacts overall well-being, and helps readers reset their biological clocks by improving their gut health. With one in four Americans suffering from digestive health issues every day, gut health has become an increasingly important part of wellness. With the human body, so many issues can be improved upon, or cured, by balancing the microbiome. But the microbiome—a community of bacteria, viruses, and yeasts that dwell in the body—has long been something that the average person can find baffling—and maybe a little bit gross. By offering simple and straightforward answers to questions like what one should be eating, what probiotics are, which vitamins and medicines really work, Dr. Raj demystifies the gut. She uses the idea of a home renovation to show how different organs and parts of the body can be “renovated” in order to optimize the microbiome. After all, balancing one's microbiome improves digestive health, brain function, emotional stability, the body's response to inflammation, immunity, and lessens premature aging. Melding the latest developments and discoveries in microbiome research, along with Dr. Raj's practical tips developed from her years of clinical experience, Gut Renovation shows readers how to turn back the biological clock and revamp the way they live forever.

Ocular toxicity is routinely assessed in toxicology studies conducted for regulatory purposes. Ocular anatomy and physiology and the assessment of ocular toxicity itself can be challenging to scientists involved in the safety assessment of pharmaceuticals, pesticides and other agents. Anatomical and physiological differences between species can impact the nature of ocular effects observed following intended or unintended exposure of ocular tissues to xenobiotics. *Ocular Toxicity in Laboratory Animals* provides a concise reference addressing ocular anatomy and physiology across species that will enhance the design and interpretation of toxicology studies conducted for regulatory purposes. The book provides an overview of routine and advanced techniques that are used to assess ocular toxicity including slit lamp biomicroscopy, indirect ophthalmoscopy, electrophysiology and imaging methods for the anterior and posterior segments of the eye. Additionally, the book defines the regulatory expectations for pharmaceuticals intended to treat ocular diseases and for other non-pharmaceutical regulated chemicals. With contributions from experts in the field, *Ocular Toxicity in Laboratory Animals* is an authoritative, accessible guide for toxicologists and other scientists involved in conducting toxicology studies for regulatory purposes and/or reviewing data from such studies.

Wolff's Anatomy of the Eye and Orbit, 8Ed Lippincott Williams & Wilkins

In *The Mind's Eye*, Oliver Sacks tells the stories of people who are able to navigate the world and communicate with others despite losing what many of us consider indispensable senses and abilities: the power of speech, the capacity to recognize faces, the sense of three-dimensional space, the ability to read, the sense of sight. For all of these people, the challenge is to adapt to a radically new way of being in the world. There is Lilian, a concert pianist who becomes unable to read music and is eventually unable even to recognize everyday objects, and Sue, a neurobiologist who has never seen in three dimensions, until she suddenly acquires stereoscopic vision in her fifties. There is Pat, who reinvents herself as a loving grandmother and active member of her community, despite the fact that she has aphasia and cannot utter a sentence, and Howard, a prolific novelist who must find a way to continue his life as a writer even after a stroke destroys his ability to read. And there is Dr. Sacks himself, who tells the story of his own eye cancer and the bizarre and disconcerting effects

of losing vision to one side. Sacks explores some very strange paradoxes—people who can see perfectly well but cannot recognize their own children, and blind people who become hyper-visual or who navigate by “tongue vision.” He also considers more fundamental questions: How do we see? How do we think? How important is internal imagery—or vision, for that matter? Why is it that, although writing is only five thousand years old, humans have a universal, seemingly innate,

potential for reading? *The Mind’s Eye* is a testament to the complexity of vision and the brain and to the power of creativity and adaptation. And it provides a whole new perspective on the power of language and communication, as we try to imagine what it is to see with another person’s eyes, or another person’s mind.
