Like no other text for the intermediate microeconomics course, Goolsbee, Levitt, and Syverson's Microeconomics bridges the gap between today's theory and practice, with a strong empirical dimension that lets students tests theory and successfully apply it. With carefully crafted features and vivid examples, Goolsbee, Levitt, and Syverson's text

helps answer two critical questions students ask, "Do people and firms really act as theory suggests?" and "How can someone use microeconomics in a practical way?" The authors teach in economics departments and business schools and are active empirical microeconomics researchers. Their grounding in different areas of empirical research allows them to present the evidence developed in the last 20 years that has tested and refined fundamental theories. Their teaching and professional experiences are reflected in an outstanding presentation of theories and applications.

A timeless classic of economic theory that remains fascinating and pertinent today, this is Frank Knight's famous explanation of why perfect competition cannot eliminate profits, the important differences between "risk" and "uncertainty," and the vital role of the entrepreneur in profitmaking. Based on Knight's PhD dissertation, this 1921 work, balancing theory with fact to come to stunning insights, is a distinct pleasure to read.

FRANK H. KNIGHT (1885-1972) is considered by some the greatest American scholar of economics of the 20th century. An economics professor at the University of Chicago from 1927 until 1955, he was one of the founders of the Chicago school of economics, which influenced Milton Friedman and George Stigler.
