Getting a Rover K-Series engine properly up and running can be a difficult task, but the result is always worthwhile. Rover K-Series Engine - Maintenance, Repair and Modification is a practical guide to keeping these unique engines in fine working order. The most well-known issue with the K-Series is the head gasket, and this book identifies common faults, before giving practical advice on how best to solve them. Step-by-step guidance on long-term engine maintenance is provided, in addition to the improvements required to prevent further problems. A K-Series engine is stripped down to examine its clever and interesting structure, and is rebuilt with improvements. Authors of over twenty automotive books, Iain Ayre and Rob Hawkins have combined their knowledge to bring you this book on the Rover K-Series engine. Topics covered include the history of the K-Series;

common faults and solutions; full strip down and rebuild; the Rover KV6; modifications for power and reliability; electronics and programming and comparisons with similar engine options.

The Rolls-Royce 25/30 was offered between 1936 and 1938 and succeeded the 20-25hp. It was intended to appeal to owner drivers and was one of the "smaller" and more popular cars of the manufacturer. A total number of 1,201 was built in the Derby plant. This handbook is a reprint of the original from 1938 and contains very useful information about the use, the maintenance and the restoration of these unique cars.

During the last century the British aircraft industry created and produced many outstanding aeroplanes. These aircraft were world leaders in advanced technology, utilizing inventions by British engineers and scientists such as radar, the jet engine, the ejector seat and vertical take-off and landing. This book describes the design-history, development and operational careers of twenty-two legendary military and civil aeroplanes. Each one has played a significant part in aviation history. Sopwith Camel, SE.5, Bristol F2B Fighter and the Airco DH4 were all great successes in the relatively early days of flight. In the thirties the Bristol Bulldog fighter was an outstanding export success and the Short 'C' Class flying boat, later to become the Sunderland of World War II fame, pioneered the long-distance routes to the Empire. The pugnacious foreign policy of Hitler's Reich rung sudden alarm bells, rapid advances in fighting aircraft for the RAF became a premium objective. The brilliant Geodic construction of the Vickers Wellington bomber helped it survive terrible punishment throughout World War II, both the Hawker Hurricane and the Supermarine Spitfire saved England from invasion and the Bristol Beaufighter, de Havilland Mosquito and Avro Lancaster took the war to enemy soil. The Gloster Meteor became the world's first operational jet fighter and the English Electric Canberra became the RAF's first jet bomber and was manufactured under licence in the USA as the Martin B-57. In post-war years the Vickers Viscount became the world's first turboprop airliner and eventually became Britain's best selling commercial aircraft, whilst the de Havilland Comet became the world's first jet airliner. Despite Britain's recessionary years in the 50s and early 60s, military success came with the beautiful Hawker Hunter, the super-sonic Fairey Delta experimental aircraft that broke the World Air Speed Record and the Vickers Valiant that pioneered the operational techniques to deliver Britain's nuclear deterrent. Later, there followed the Mach 2 English Electric Lightning and the ill-fated TSR-2, the cancellation of which is still regarded as one of the greatest mistakes ever made in British aviation history. Finally, the Harrier, the world's first vertical take-off and landing jet fighter that is still in service and now only being built in the USA. Finally the Harrier, the world's first vertical take-off and landing jet fighter, still in service and now being further developed in the USA.

THE SECRET OF SUCCESSFUL RUNNING. Examination of privately-owned cars has demonstrated that while some drivers realise the necessity of periodical lubrication of all moving parts, others, who have not been trained as mechanics, content themselves by oiling the parts which come immediately under their eye, and neglect other parts, thus allowing the chassis to be injured, to become noisy and inefficient, and their masters to be put to unnecessary expense in repairs. An endeavour has been made in this book by means of copious illustrations, to enable the least experienced owner to satisfy himself if his driver is or is not giving the attention which is indispensable for the economical and satisfactory working of a chassis. First issued January, 1911 (reprinted June, 1920)
