FERGUSON KATELYN

Academy and Literature FeniXX

The startling economic and political answers behind Europe's historical dominance Between 1492 and 1914, Europeans conquered 84 percent of the globe. But why did Europe establish global dominance, when for centuries the Chinese, Japanese, Ottomans, and South Asians were far more advanced? In *Why Did Europe Conquer the World?*,

Philip Hoffman demonstrates that conventional explanations—such as geography, epidemic disease, and the Industrial Revolution—fail to provide answers. Arguing instead for the pivotal role of economic and political history, Hoffman shows that if certain variables had been different, Europe would have been eclipsed, and another power could have become master of the world. Hoffman sheds light on the two millennia of economic, political, and historical changes that set European states on a distinctive path of development, military

rivalry, and war. This resulted in astonishingly rapid growth in Europe's military sector, and produced an insurmountable lead in gunpowder technology. The consequences determined which states established colonial empires or ran the slave trade, and even which economies were the first to industrialize. Debunking traditional arguments, *Why Did Europe Conquer the World?* reveals the startling reasons behind Europe's historic global supremacy.

L'Atelier Springer Science & Business Media

From the Treaty of Versailles to the 2018 centenary and beyond, the history of the First World War has been continually written and rewritten, studied and contested, producing a rich

historiography shaped by the social and cultural circumstances of its creation. Writing the Great War provides a groundbreaking survey of this vast body of work, assembling contributions on a variety of national and regional historiographies from some of the most prominent scholars in the field. By analyzing perceptions of the war in contexts ranging from Nazi Germany to India's struggle for independence, this is an illuminating collective study of the complex interplay of memory and history.

Dictionnaire National ou grand Dictionnaire classique de la langue française Routledge

Acclaimed by various content platforms (books, music, movies) and auction sites online, recommendation systems are key

elements of digital strategies. If development was originally intended for the performance of information systems, the issues are now massively moved on logical optimization of the customer relationship, with the main objective to maximize potential sales. On the transdisciplinary approach, engines and recommender systems brings together contributions linking information science and communications, marketing, sociology, mathematics and computing. It deals with the understanding of the underlying models for recommender systems and describes their historical perspective. It also analyzes their development in the content offerings and assesses their impact on user behavior.

This volume investigates what role colonial communities and diaspora have had in shaping the Portuguese empire and its heritage, exploring topics such as Portuguese migration to Africa, the Ismaili and the Swiss presence in Mozambique, the Goanese in East Africa, the Chinese in Brazil, and the history of the African presence in Portugal.

Arts & Humanities Citation Index Cornell University Press

The Afterlives of the Terror explores how those who experienced the mass violence of the French Revolution struggled to come to terms with it.

Focusing on the Reign of Terror, Ronen Steinberg challenges the presumption that its aftermath was characterized by silence and enforced collective amnesia.

Instead, he shows that there were painful, complex, and sometimes surprisingly honest debates about how to deal with its legacies. As *The Afterlives of the Terror* shows, revolutionary leaders, victims' families, and ordinary citizens argued about accountability, retribution, redress, and commemoration. Drawing on the concept of transitional justice and the scholarship on the major traumas of the twentieth century, Steinberg explores how the French tried, but ultimately failed, to leave this difficult past behind. He argues that it was the same democratizing, radicalizing dynamic that led to the violence of the Terror, which also gave rise to an unprecedented interrogation of how society is affected by events of enormous brutality. In this

sense, the modern question of what to do with difficult pasts is one of the unanticipated consequences of the eighteenth century's age of democratic revolutions. Thanks to generous funding from Michigan State University and its participation in TOME (Toward an Open Monograph Ecosystem), the ebook editions of this book are available as Open Access (OA) volumes, available on the Cornell University Press website and other Open Access repositories.

Co-Engineering and Participatory Water Management Springer

What makes a city an economic, political, and cultural center? In *The Places Where Men Pray Together*, Paul Wheatley draws on two decades of astonishingly wide-ranging research to demonstrate that Islamic cities are

defined by function rather than form—by what they do rather than what they are. Focusing on the roles of cities during the first four centuries of Islamic expansion, Wheatley explores interconnected cultural, historical, economic, political, and religious factors to provide the clearest and most extensively documented portrait of early Islamic urban centers available to date. Building on the tenth-century geographer al-Maqdisi's writings on urban centers of the Islamic world, buttressed by extensive comparative material from roadbooks, topographies, histories, adab literatures, and gazetteers of the time, Wheatley identifies the main functions of different Islamic urban centers. Chapters on each of the thirteen centers that al-Maqdisi identified, ranging from the

Atlantic to the Indus and from the Caspian to the Sudan, form the heart of this book. In each case Wheatley shows how specific agglomeration and accessibility factors combined to make every city functionally distinct as a creator of effective space. He also demonstrates that, far from revolutionizing every aspect of life in these cities, the adoption of Islam often affected the development of these cities less than previously existing local traditions. *The Places Where Men Pray Together* is a monumental work that will speak to scholars and readers across a broad variety of disciplines, from historians, anthropologists, and sociologists to religious historians, archaeologists, and geographers.

Bibliography of the History of

Medicine Berghahn Books

The book shows a very original organization addressing in a non traditional way, but with a systematic approach, to who has an interest in using mathematics in the social sciences. The book is divided in four parts: (a) a historical part, written by Vittorio Capecchi which helps us understand the changes in the relationship between mathematics and sociology by analyzing the mathematical models of Paul F. Lazarsfeld, the model of simulation and artificial societies, models of artificial neural network and considering all the changes in scientific paradigms considered; (b) a part coordinated by Pier Luigi Contucci on mathematical models that consider the relationship between the mathematical

models that come from physics and linguistics to arrive at the study of society and those which are born within sociology and economics; (c) a part coordinated by Massimo Buscema analyzing models of artificial neural networks; (d) a part coordinated by Bruno D'Amore which considers the relationship between mathematics and art. The title of the book "Mathematics and Society" was chosen because the mathematical applications exposed in the book allow you to address two major issues: (a) the general theme of technological innovation and quality of life (among the essays are on display mathematical applications to the problems of combating pollution and crime, applications to mathematical problems of immigration, mathematical

applications to the problems of medical diagnosis, etc.) (b) the general theme of technical innovation and creativity, for example the art and mathematics section which connects to the theme of creative cities. The book is very original because it is not addressed only to those who are passionate about mathematical applications in social science but also to those who, in different societies, are: (a) involved in technological innovation to improve the quality of life; (b) involved in the wider distribution of technological innovation in different areas of creativity (as in the project "Creative Cities Network" of UNESCO).

From pioneering attachment researchers, this book takes an

expansive look at the nature and functions of security dynamics in personal and social relationships. Mario Mikulincer and Phillip R. Shaver examine how attachment operates not only in close dyadic relationships (parent-child, romantic partners), but also between teachers and students, therapists and clients, physicians and patients, leaders and followers, and within organizations. Also considered is the nature of "attachments" to objects; commercial brands; substances, such as foods and drugs; and places. The book highlights ways to integrate attachment theory with other influential social and psychological theories concerning factors that enable individuals, groups, and societies to flourish despite inevitable threats, conflicts, and losses.

See also the related work from Mikulincer and Shaver, Attachment Theory Applied: Fostering Personal Growth through Healthy Relationships. Who's who Princeton University Press Computer mediated interpersonal interactions are defining our daily lives as we know it. Studying this phenomenon with various methodologies, across different cultures and traditions is a crucial component in understanding social ties. This book brings together articles that approach online dating from a range of cultural and critical perspectives. The research decodes the level of engagement and manner of approaching online dating in various countries such as France, India, China, Turkey, Cuba, USA and Portugal. Mapping the history of dating and

courtship shows the evolution of these practices even before the introduction of the online medium and traces parallels and differences between old and new traditions.

Index Medicus. Third Series Guilford Publications

The creation of new lexical units and patterns has been studied in different research frameworks, focusing on either system-internal or system-external aspects, from which no comprehensive view has emerged. The volume aims to fill this gap by studying dynamic processes in the lexicon - understood in a wide sense as not being necessarily limited to the word level - by bringing together approaches directed to morphological productivity as well as approaches analyzing general types of

lexical innovation and the role of discourse-related factors. The papers deal with ongoing changes as well as with historical processes of change in different languages and reflect on patterns and specific subtypes of lexical innovation as well as on their external conditions and the speakers' motivations for innovating. Moreover, the diffusion and conventionalization of innovations will be addressed. In this way, the volume contributes to understanding the complex interplay of structural, cognitive and functional factors in the lexicon as a highly dynamic domain.

The Historiography of World War I from 1918 to the Present University of Chicago Press

A Chemistry background prepares you for much more than just a laboratory

career. The broad science education, analytical thinking, research methods, and other skills learned are of value to a wide variety of types of employers, and essential for a plethora of types of positions. Those who are interested in chemistry tend to have some similar personality traits and characteristics. By understanding your own personal values and interests, you can make informed decisions about what career paths to explore, and identify positions that match your needs. By expanding your options for not only what you will do, but also the environment in which you will do it, you can vastly increase the available employment opportunities, and increase the likelihood of finding enjoyable and lucrative employment. Each chapter in this book provides

background information on a nontraditional field, including typical tasks, education or training requirements, and personal characteristics that make for a successful career in that field. Each chapter also contains detailed profiles of several chemists working in that field. The reader gets a true sense of what these people do on a daily basis, what in their background prepared them to move into this field, and what skills, personality, and knowledge are required to make a success of a career in this new field. Advice for people interested in moving into the field, and predictions for the future of that career, are also included from each person profiled. Career fields profiled include communication, chemical information,

patents, sales and marketing, business development, regulatory affairs, public policy, safety, human resources, computers, and several others. Taken together, the career descriptions and real case histories provide a complete picture of each nontraditional career path, as well as valuable advice about how career transitions can be planned and successfully achieved by any chemist.

Blockchain is widely considered a new key technology. The Foundation for

Technology Assessment (TA-SWISS) has proposed a comprehensive assessment of blockchain technologies. With this publication, TA-SWISS provides the much-needed social contextualisation of blockchain. The first, more technical part of the study takes an in-depth look at how blockchain functions and examines the economic potential of this technology. By analysing multiple real-world applications, the study sheds light on where the blockchain has advantages over traditional applications and where existing technologies continue to be the better solution. The second part of the study examines how blockchain became mainstream. It explores the origins of blockchain in the early history of information technology and computer networks. The study also reveals the

impact blockchain has on industrial and public spaces. Finally, it discusses the social implications and challenges of blockchain against the background of a new socio-technical environment.

Tendinopathy in Athletes Walter de Gruyter GmbH & Co KG

A trans-disciplinary book offering evaluation-based approaches for effective participatory interventions, for academic researchers, practitioners and policy-makers working in water management.

The National Union Catalog, Pre-1956 Imprints Vita e Pensiero

This volume explores how mobilizing Boltanski and Thévenot's economies of worth framework, and its associated concepts of justification, evaluation and critique, help address questions

regarding the premises and dynamics of coordinated action, both within and across organizations, and by so doing help advance our understanding.

Fortunes et groupes sociaux à Toulouse sous la Révolution Emerald Group Publishing

This concise volume in the Encyclopaedia of Sports Medicine series, published under the auspices of the International Olympic Committee, provides a dependable source of current knowledge available on tendinopathy and covers both the basic science and clinical aspects of the subject. Despite its high incidence, the precise etiopathogenesis and effective treatment of tendinopathy remain elusive. Tendinopathy in Athletes draws on the expertise of an international and

prolific collection of contributors, both clinicians and scientists, who provide new insights into this specialized area. This book: provides a comprehensive resource for both clinicians and researchers with information organized logically, with an easy-to-follow progression from the basic scientific findings to clinical applications discusses the full range of treatment modalities, including new molecular and biological approaches, plus surgical and alternative approaches to tendinopath contains “What We Need to Know” sections that suggest future areas of research for young investigators. As tendinopathy remains one of the most common injuries encountered, both in sports and at the workplace, this essential volume is sure to be a source of frequent

consultation.

L'économie sociale de la France sous Henri IV, 1589-1610 Cambridge University Press

An annual biographical dictionary, with which is incorporated "Men and women of the time."

Human Growth John Wiley & Sons
An illuminating, indispensable analysis of a watershed moment and its possible aftermath. For people and governments around the world, the onset of the COVID-19 pandemic seemed to place the preservation of human life at odds with the pursuit of economic and social life. Yet this naive alternative belies the complexity of the entanglements the crisis has created and revealed not just between health and wealth but also around morality, knowledge,

governance, culture, and everyday subsistence. Didier Fassin and Marion Fourcade have assembled an eminent team of scholars from across the social sciences to reflect on the myriad ways SARS-CoV-2 has entered, reshaped, or exacerbated existing trends and structures in every part of the globe. The contributors show how the disruptions caused by the pandemic have both hastened the rise of new social divisions and hardened old inequalities and dilemmas. An indispensable volume, *Pandemic Exposures* provides an illuminating analysis of this watershed moment and its possible aftermath. *Index Medicus* Springer Science & Business Media
