Air conditioning in vintage cars often falls into disrepair, as owners figure that it never really worked all that well when it was new, and assume that rejuvenation would be prohibitively expensive. In his new book, *Just Needs a Recharge: The Hack Mechanic Guide to Vintage Air Conditioning*, Rob Siegel details exactly what's needed to resurrect long-dead air conditioning in a vintage car, or install a/c in a car that never had it. In a level of detail not found in any other automotive a/c book, Rob reveals what you need to know about flare and o-ring fittings, upgrading to a rotary-style compressor and a parallel-flow condenser, making or specifying custom hoses, and selecting refrigerant so that the a/c blows cold enough to be usable. Although the book draws from Rob's BMW experience (with specifics for the BMW 2002 and 3.0CS), and concentrates on vintage a/c systems (those that have flare fittings and originally contained R12), most of the information applies to any air conditioning system, foreign or domestic, vintage or modern. Written

in Rob's entertaining Hack Mechanic narrative voice, and including 240 photographs and illustrations, the book covers theory, the choice of refrigerant (R12, R134a, other EPA-approved, non-EPA-approved), legality, tools for a/c work, fittings and sizes, the compressor, the evaporator assembly and expansion valve or orifice tube, the condenser and fan, the receiver/drier or accumulator, electrical connections and compressor cycling, connecting and using manifold gauges, the basic steps for a/c rejuvenation, from-scratch a/c retrofit, making and installing hoses, flushing the system, pressure-testing and leak detection, evacuating and charging the system troubleshooting, and other things that heat up the cabin.

It is said that one of the earliest trades in the world is that of the armorer. Historically, it is a profession dated slightly after prostitution, but well before banking! Since the birth of the Royal Flying Corps in 1912 through to the modern Royal Air Force, the role of the armorer has been pivotal. Not for nothing did the founder of the RAF, Lord Trenchard, once declare: 'The armorer -

without him there is no need for an air force.' In the years since the need for RAF armorers was first recognized, it has been a role that has evolved with the times. What has remained constant, however, is the fact that it is still a fascinating and potentially dangerous trade with many different branches and specialisms. In this book the authors, one of whom, Tony Lamsdale, is himself a former RAF armorer, reveal the previously untold story of how the trade has adapted to the most modern of military machines, the aircraft. The authors look at the shared history of the armorer and the RAF through the eyes of those who served. These veterans' stories span decades, and their first-hand accounts and insights into conflict and peace-time operations demonstrate the qualities and characteristics that make armorers unique. The book starts with a brief history of the armorer, then before capturing the adventures and exploits of RAF armorers from the Second World War and on into the Cold War. The dangerous duties of the armorers on deployment in such places as the Falklands, Iran, Iraq or Afghanistan are all explored. There is also the question of having to learn of bomb dumps, the use of small arms and the unique world of the armorer with its own peculiar language and the camaraderie of the crew room. With each chapter brought to life through personal anecdotes and shared experiences, this book provides an insight into an utterly

essential role which has remained largely hidden - until now.

Paul John Eakin's earlier work *Fictions in Autobiography* is a key text in autobiography studies. In it he proposed that the self that finds expression in autobiography is in fundamental ways a kind of fictive construct, a fiction articulated in a fiction. In this new book Eakin turns his attention to what he sees as the defining assumption of autobiography: that the story of the self does refer to a world of biographical and historical fact. Here he shows that people write autobiography not in some private realm of the autonomous self but rather in strenuous engagement with the pressures that life in culture entails. In so demonstrating, he offers fresh readings of autobiographies by Roland Barthes, Nathalie Sarraute, William Maxwell, Henry James, Ronald Fraser, Richard Rodriguez, Henry Adams, Patricia Hampl, John Updike, James McConkey, and Lillian Hellman. In the introduction Eakin makes a case for reopening the file on reference in autobiography, and in the first chapter he establishes the complexity of the referential aesthetic of the genre, the intricate interplay of fact and fiction in such texts. In subsequent chapters he explores some of the major contexts of reference in autobiography: the biographical, the social and cultural, the historical, and finally, underlying all the rest, the somatic and temporal dimensions of the lived experience of identity. In his discussion of contemporary theories of the self, Eakin draws especially on cultural anthropology and developmental psychology.

HVAC Training 101 is a site visited by over 100,000 enthusiasts monthly, who are interested in becoming HVAC technicians. The site initially began as the passion project of a retired HVAC technician. The site quickly gained popularity, building a strong community of aspiring HVAC technicians. Currently, it is managed by a team of ex-HVAC technicians with decades of experience in the industry. Head over to [HVACTraining101.Com](#) to learn more. We began by writing about how to become certified as an HVAC technician. With rules and certifications varying for each state, it was a challenging task. We had a few friends in other states help us out, but for some states, we had to dig really deep to find the information needed. Our audience at the time was very happy with the information we provided. At this point, we started getting many questions about EPA 608 certification. Once you get the education and experience needed to become a technician, prospective employers will ask for certification to handle refrigerants. When we started writing about how to become certified, viewers again requested we write a study guide to help them prepare for the 608 exams. The study guides out there were dense and had much more

information than was needed to pass the test. This inspired us to embark on a journey to write the simplest study guide for the EPA 608 exam, which would still cover all the necessary information. We hope we have achieved our intended objective. The journey to becoming an HVAC technician can be long and arduous. We congratulate you on taking this path and wish you the best in cracking the EPA 608 exam.

Even before the heyday of Von Dutch and Big Daddy, the ultimate way to personalize your car or motorcycle was to lay some wicked lines on top of the paintwork. Done with a steady hand and an eye for style, pinstripes speak volumes. In *How to Pinstripe*, acclaimed veteran striper Alan Johnson teaches you everything you need to know to get started, to further your mastery of the form, or to simply understand how a good design comes together. Following a primer on the history and evolution of pinstriping, this book launches into a step-by-step guide to the pinstriping process--from choosing paint and brushes that suit your style and abilities, to preparing surfaces, experimenting with symmetrical and asymmetrical designs, striping freehand, and using grids and patterns. While stressing the importance of finding your own style and having fun with the hobby, Johnson also explains the basics of color theory and unique considerations for antique and classic cars, hot rods and customs, and motorcycles. For more advanced pinstripers, there's also tried-and-true advice on apprenticing and working car shows. Illustrated with color photography throughout, *How to Pinstripe* is the perfect source for beginners and veterans alike.

The Sinking of the Titanic and Great Sea Disasters is an exciting collection of first-hand stories describing the catastrophe of Titanic's maiden voyage as told by its survivors shortly after the ship sank. Originally written and published in 1912, Logan Marshall's book was the very first attempt to solve the mystery of the accident and relieve the heartache it stirred internationally. Marshall narrates the personal stories of Titanic's passengers before, during, and after the sinking of the ill-fated ship. This book takes us back in time and forces us to understand the trauma of our ancestors from a not-so-comfortable distance. Listen to the voices of real passengers tell their own touching stories of tragedy and see the photographs and sketches that accompany their stories. Also included are records of previous great disasters of the sea, descriptions of the development of safety and life-saving appliances, and a plain statement of causes of such catastrophes and how to avoid them. Skyhorse Publishing, as well as our Arcade imprint, are proud to publish a broad range of books for readers interested in history--books about World War II, the Third Reich, Hitler and his henchmen, the JFK assassination, conspiracies, the American Civil War, the American Revolution, gladiators, Vikings, ancient Rome, medieval times, the old West, and much more. While not every title we publish becomes a New York Times bestseller or a national bestseller, we are committed to books on subjects that are sometimes overlooked and to authors whose work might not otherwise find a home.

With people's fascination for food increasing, there are more cookery shows and magazines than ever, Medieval banquets are sold-out events and classic recipes and ingredients are back in fashion, which is what this book sets out to explore. Highlighting the advantages and disadvantages of each era from Roman times onwards. Anna Selby recreates classic recipes from Epicurus' stuffed dormice to recipes which readers really will want to recreate. She explores how trade and improved transportation increased foodstuffs available and reflects on how we're returning to the old-fashioned notion of seasonal foods - just like our ancestors had to do.

This "ambitious [and] delightful" (The New York Times) work of literary nonfiction interweaves the science and history of the powerful refrigerant (and dangerous greenhouse gas) Freon with a haunting meditation on how to live meaningfully and morally in a rapidly heating world. In *After Cooling*, Eric Dean Wilson braids together air-conditioning history, climate science, road trips, and philosophy to tell the story of the birth, life, and afterlife of Freon, the refrigerant that ripped a hole larger than the continental United States in the ozone layer. As he traces the refrigerant's life span from its invention in the 1920s--when it was hailed as a miracle of scientific progress--to efforts in the 1980s to ban the chemical (and the resulting political backlash), Wilson finds himself on a journey through the American heartland, trailing a man who buys up old tanks of Freon stockpiled in attics and basements to destroy what remains of the chemical before it can do further harm. Wilson is at heart an essayist, looking far and wide to tease out what particular forces in American culture--in capitalism, in systemic racism, in our values--combined to lead us into the Freon crisis and then out. "Meticulously researched and engagingly written" (Amitav Ghosh), this "knockout debut" (New York Journal of Books) offers a rare glimpse of environmental hope, suggesting that maybe the vast and terrifying problem of global warming is not beyond our grasp to face.

Air conditioning boosts man's efficiency no less than his comfort. Air-conditioned homes, offices, and factories unmistakably raise human productivity and reduce absenteeism, turnover, mistakes, accidents and grievances, especially in summer. Accordingly, many employers every year cool workrooms and offices to raise summer profits. Employees in turn find cool homes enhancing not only comfort and prestige but also personal efficiency and income. With such economic impetus, low-cost summer cooling must irresistibly spread to all kinds of occupied buildings. Refrigeration provides our best cooling, serving well where people are closely spaced in well-constructed, shaded, and insulated structures. However, its first and operating costs bar it from our hottest commercial, industrial, and residential buildings. Fortunately, evaporative cooling is an economical substitute in many regions. First used in Southwest homes and businesses and in textile mills, it soon invaded other fields and climates. In 1946, six firms produced 200,000 evaporative coolers; in 1958, 25 firms produced 1,250,000, despite the phenomenal sale of refrigerating window air conditioners. Though clearly secondary to refrigeration, evaporative cooling is 60 to 80 percent is economical for moderate income groups and cheaper to buy and operate. Thus, it climates where summers are short. Moreover, it cheaply cools hot, thinly constructed mills, factories, workshops,

foundries, powerhouses, farm buildings, canneries, etc., where refrigerated cooling is prohibitively expensive.
