The Emigrant Communities of

LatviaSpringer

Springer

The Yearbook of International

Organizations provides the most

extensive coverage of non-profit

international organizations currently

available. Detailed profiles of

international non-governmental and

intergovernmental organizations (IGO),

collected and documented by the Union

of International Associations, can be

found here. In addition to the history,

aims and activities of international

organizations, with their events,

publications and contact details, the

volumes of the Yearbook include

networks between associations,

biographies of key people involved and

extensive statistical data. Volume 2

allows users to locate organizations by

the country in which secretariats or

members are located.

Bibliography of Agriculture SPIE-

International Society for Optical

Engineering

Proceedings of SPIE present the original

research papers presented at SPIE

conferences and other high-quality

conferences in the broad-ranging fields

of optics and photonics. These books

provide prompt access to the latest

innovations in research and technology

in their respective fields. Proceedings of

SPIE are among the most cited

references in patent literature.

Spectroscopy of the Atmospheres

DEStech Publications, Inc

The book is written for active learners -

those keen on cutting their own path through the complex and at times hardly comprehensible world of THEORY in International Relations. To aid this

process as much as possible, this book

employs the didactical and methodical

concept of integrating teaching and self-

study. The criteria for structured learning

about IR theory will be derived from an

extensive discussion of the questions

and problems of philosophy of science

(Part 1). Theory of IR refers to the

scientific study of IR and covers all of the

following subtopics: the role and status

of theory in the academic discipline of

IR; the understanding of IR as a science

and what a "scientific" theory is; the

different assumptions upon which theory

building in IR is based; the different

types of theoretical constructions and

models of explanations found at the

heart of particular theories; and the

different approaches taken on how

theory and the practice of international

relations are linked to each other. The

criteria for the structured learning

process will be applied in Part 2 of the

book during the presentation of five

selected theories of International

Relations. The concept is based on

"learning through example" - that is,

the five theories have been chosen

because, when applying the criteria

developed in Part 1 of the book, each

single theory serves as an example for

something deeply important to learn

about THEORY of IR more generally.

This open access volume examines

experiences of contemporary Latvian

migrants, thereby focusing on reasons

for emigration, processes of integration in their host countries, and – in the case of return migration - re-integration in their home country. In the context of European migration, the book describes the case of Latvia, which is interesting due to the multiple waves of excessive emigration, continuously high migration potential among European Union member states, and diverse migrant characteristics. It provides a fascinating insight into the social and psychological aspects linked to migration in a comparative context. The data in this volume is rich in providing individual level perspectives of contemporary Latvian migrants by addressing issues such as emigrants' economic, social and cultural inclusion in the host country, ties with the home country and culture, interaction with public authorities both in the host and home country, political views, and perspectives on the permanent settlement in migration or return. Through topics such as assimilation of children, relationships between emigrants representing different emigration waves, the complex identities and attachments of minority emigrants, and the role of culture and media in identity formation and presentation, this book addresses topics that any contemporary emigrant community is faced with.

Yearbook of International

Organizations United Nations

This volume is the newest release in the authoritative series issued by the National Academy of Sciences on dietary reference intakes (DRIs). This series provides recommended intakes, such as Recommended Dietary Allowances (RDAs), for use in planning nutritionally adequate diets for individuals based on age and gender. In addition, a new reference intake, the Tolerable Upper

Intake Level (UL), has also been established to assist an individual in knowing how much is "too much" of a nutrient. Based on the Institute of Medicine's review of the scientific literature regarding dietary micronutrients, recommendations have been formulated regarding vitamins A and K, iron, iodine, chromium, copper, manganese, molybdenum, zinc, and other potentially beneficial trace elements such as boron to determine the roles, if any, they play in health. The book also: Reviews selected components of food that may influence the bioavailability of these compounds. Develops estimates of dietary intake of these compounds that are compatible with good nutrition throughout the life span and that may decrease risk of chronic disease where data indicate they play a role. Determines Tolerable Upper Intake levels for each nutrient reviewed where adequate scientific data are available in specific population subgroups. Identifies research needed to improve knowledge of the role of these micronutrients in human health. This book will be important to professionals in nutrition research and education.

Los investigadores Rafael Escribano e Isabel Tanarro cuentan con una larga experiencia en espectroscopia molecular y física del plasma, y se han centrado durante los últimos quince años en el estudio de sistemas de relevancia atmosférica y astrofísica. En este libro, presentan una serie de contribuciones de otros renombrados colegas a cerca de la atmósfera, la espectroscopia y la astronomía, la metodología y la descripción de técnicas empleadas en estos campos, así como los resultados

actualizados de sus propias investigaciones. Esta obra incluye en definitiva algunos temas de gran interés tanto para la comunidad científica como para el público en general, como las recientes misiones espaciales a cometas, sucesos luminosos espectaculares en la alta atmósfera, o la controvertida cuestión del calentamiento global y el cambio climático.

Agroecology in Policy and Practice

Cambridge University Press

The monograph contains new information about biodiversity, morphology and ecology in the model group of estuarine crustaceans, *Eurytemora*, widely distributed in the Northern Hemisphere. Several chapters treat questions on ecology and phylogeny related to marine species and time and place of origin of these calanoid copepod species.

Real Analysis Springer

In the past years, there has been steady growth in work relating to agroecology. People-centred, knowledge-intensive and rooted to sustainability, it is now well established that agroecology matches the transformative approach called for by the 2030 Agenda; a transition to sustainable food and agriculture systems that ensures food security and nutrition for all, provides social and economic

equity, and conserves biodiversity and the ecosystem services on which agriculture depends. Although not a new concept, agroecology is today gaining interest worldwide among a wide range of actors as an effective answer to climate change and the interrelated challenges facing food systems, finding expression in the practices of food producers, in grassroots social processes for sustainability and the public policies of many countries around the world.

Vitis Verlag Barbara Budrich

This book is about spaceborne missions and instruments. In addition, surveys of airborne missions and of campaigns can be found on the accompanying CD-ROM in pdf-format. Compared with the 3rd edition the spaceborne part grew from about 300 to 1000 pages. The complete text - including the electronic-only chapters - contains more than 1900 pages. New chapters treat the history of Earth observation and university missions. The number of commercial Earth imaging missions has grown significantly. A chapter contains reference data and definitions. Extensive appendices provide a comprehensive glossary, acronyms and abbreviations and an index of sensors. An effort has been made to present the information in context, to point out relationships and interconnections. The book may serve as a reference and guide to all involved in the various national and international space programs: researchers and managers, service providers and data users, teachers and students.

International Aerospace Abstracts

The Emigrant Communities of Latvia

The idea of viewing individuals' knowledge and abilities as an asset—as human capital—can be traced back to the work of Adam Smith in the 18th century. But human capital is intangible,

and hence hard to define and measure. Increasingly, however, policymakers are calling for ways to understand and quantify human capital, in order to better understand what drives economic growth and the functioning of labour markets, to assess the long-term sustainability of a country's development path, and to measure the output and productivity performance of the educational sector. Devising a robust methodology for the monetary valuation of the stock of human capital is especially important as studies suggest that human capital is by far the most important component of the total capital stock in most advanced economies. This Guide on Measuring Human Capital discusses conceptual, methodological and implementation issues and challenges. The recommendations are a first attempt to come up with a way to estimate and record the role of human capital in a way that is aligned with the principles of the national accounts and that is comparable across economies.

This book addresses core questions about the role of materials in general and of wood in particular in the construction of string instruments used in the modern symphony orchestra – violins, violas, cellos and basses. Further attention is given to materials for classical guitars, harps, harpsichords and pianos. While some of the approaches discussed are traditional, most of them depend upon new scientific approaches to the study of the structure of

materials, such as for example wood cell structure, which is visible only using modern high resolution microscopic techniques. Many examples of modern and classical instruments are examined, together with the relevance of classical techniques for the treatment of wood. Composite materials, especially designed for soundboards could be a good substitute for some traditional wood species. The body and soundboard of the instrument are of major importance for their acoustical properties, but the study also examines traditional and new wood species used for items such as bows, the instrument neck, string pegs, etc. Wood species' properties for musical instruments and growth origins of woods used by great makers such as Antonio Stradivari are examined and compared with more recently grown woods available to current makers. The role of varnish in the appearance and acoustics of the final instrument is also discussed, since it has often been proposed as a 'secret ingredient' used by great makers. Aspects related to strings are commented. As well as discussing these subjects, with many illustrations from classical and contemporary instruments, the book gives attention to conservation and restoration of old instruments and the physical results of these techniques. There is also discussion of the current value of old instruments both for modern performances and as works of art having great monetary value. The book will be of interest and value to researchers, advanced students, music historians, and contemporary string instrument makers. Musicians in general, particularly those playing string instruments, will also find its revelations fascinating. It will also attract the attention of those using wood for a

variety of other purposes, for its use in musical instruments uncovers many of its fundamental features. Professor Neville H. Fletcher Australian National University, Canberra
The Emigrant Communities of Latvia
 Yearbook of International Orga
 As the first comprehensive reference for the eye, its support structures, diseases, and treatments, Encyclopedia of the Eye is an important resource for all visual scientists, ophthalmologists, and optometrists, as well as researchers in immunology, infectious disease, cell biology, neurobiology and related disciplines. This four-volume reference is unique in its coverage of information on all tissues important for vision, including the retina, cornea and lens. It also covers the physiological and pathophysiologic processes that affect all eye tissues. This Encyclopedia is invaluable for graduate students and postdoctoral fellows who are seeking an introduction to an area of eye research.

Each chapter explains the basic concepts and provides references to relevant chapters within the Encyclopedia and more detailed articles across the wider research literature. The Encyclopedia is also particularly useful for visual scientists and practitioners who are researching a new area, seeking deeper understanding of important research articles in fields adjacent to their own, or reviewing a grant outside their immediate area of expertise. Written by experts at a level that permits students to grasp key elements of a specific subject Provides an entryway into the major features of current eye research No other source puts this much information, so well-indexed and with so many helpful full color figures and graphics, in the hands of the ophthalmic scientist
