VERSUS: Heritage for Tomorrow

Createspace Independent Publishing Platform

The agricultural sector in sub-Saharan Africa badly needs to find new ways of doing things if agricultural development is to contribute to food security and poverty alleviation. This is not only about introducing new technologies to farmers. It is also, even more importantly, about

changes in the way old and new technologies, ideas and initiatives are put into practice - as well as how different actors work (together) to stimulate innovation. This book takes a look at platforms that have been set up in order to trigger such change. However, little is known about how innovation platforms actually operate. This book brings together twelve stories from the field about creating and working with innovation platforms in Africa. It is the result of practitioners putting their heads together to analyze their experiences, and to draw lessons from them. This joint analysis

provides insights into how innovation platforms (can) work and different options available to them, and also offers suggestions on how to deal with their main common challenges. This publication is written from the perspective of practitioners for practitioners. It provides new information on the performance of innovation platforms in developing countries, offers options to policy makers, and gives inspiration to all actors involved in one way or another in stimulating innovation in the agricultural sector. *Art in the Anthropocene* Bloomsbury Publishing

This book presents a novel and systematic social theory of soil, and is representative of the rising interest in 'the material' in social sciences. Bringing together new modes of 'critical description' with speculative practices and methods of inquiry, it contributes to the exploration of current transformations in socioecologies, as well as in political and artistic practices, in order to address global ecological change. The chapters in this edited volume challenge scholars to attend more carefully to the ways in which they think about soil, both materially and theoretically. Contributors address a range of topics, including new ways of thinking about the politics of caring for soils; the ecological and symbiotic relations between soils; how the productive capacities and contested governance of soils are deployed as matters of political concern; and indigenous ways of knowing and being with soil.

Routledge

"Over the next few decades, we will see a profound energy transformation as society shifts from fossil fuels to renewable resources like solar, wind, biomass. But what might a one hundred percent

renewable future actually look like, and what obstacles will we face in this transition? Authors explore the practical challenges and opportunities presented by the shift to renewable energy."--Page 4 of cover.

Healing Places Oxford University Press

Our global agricultural and food system is broken and needs to transition to one that is more sustainable and beneficial to the world's population. This seems hard in the face of the linked challenges of climate change, natural resource depletion, and worldwide economic and social upheaval. At the same time, farmer-led social movements are growing, and there is increasing recognition that agroecology and food sovereignty are key solutions for both nutritious food security and climate change adaptation. This book takes you along in the transition to agroecology, which is already happening, worldwide! The author shows us the as of yet dispersed but growing movement of many smallholder farmers, projects, programs, research, and policy agendas that are making the change. Since the daily news prevents us from noticing, Jelleke shows us the most beautiful and intriguing

examples of ground-breaking people and projects. She gives you the keys for transition. She makes us look back from 2030. What have we done by then you and I, your friends and colleagues, investors and politicians to have arrived in a changed food-secure world where agroecology is the new normal? This book is a must-read for researchers, politicians, students, and consumers alike.

Critical Community Psychology

Chicago Review Press

This timely collection brings together critical, analytic, historical, and practical studies to address what ethics means in the practice of design. Designers face the same challenges as everyone else in the complex conditions of contemporary cultural life-choices about consumption, waste, exploitation, ecological damage, and political problems built into the supply chains on which the global systems of inequity currently balance precariously. But designers face the additional dilemma that their paid work is often entangled with promoting the same systems such critical approaches seek to redress: how to reconcile this contradiction, among others, in seeking to chart an ethical course of

action while still functioning effectively in the world. Ethics in Design and Communication acknowledges the complexity of this subject matter, while also demonstrating that in the ongoing struggle towards an equitable and sustainable world, the talents of design and critical thought are essential. Featured case studies include graphic design internships today, the dark web, and media coverage of the 2016 US presidential election. The fact that within this book such a wide array of practitioners, scholars, critics, and professionals commit to addressing current injustices is already a positive sign. Nonetheless, it is essential that we guard against confusing the coercive force of moral imperatives with ethical deliberation when conceiving a foundation for action.

Transformative Consumer Research for Personal and Collective Well-being
Routledge

In the 2012 edition of its flagship report, Worldwatch celebrates the twentieth anniversary of the 1992 Earth Summit with a far-reaching analysis of progress toward building sustainable economies. Written in

clear language with easy-to-read charts, State of the World 2012 offers a new perspective on what changes and policies will be necessary to make sustainability a permanent feature of the world's economies. The Worldwatch Institute has been named one of the top three environmental think tanks in the world by the University of Pennsylvania's Think Tanks and Civil Societies Program. *Staying with the Trouble* Taschen America Llc

"Support structures is a manual for what bears, sustains, props and holds up. It is the culminations of many endeavours. The first is the collaborative project "Support Structures" by Céline Condorelli and Gavin Wade from 2003-2009. The second is a critical enquiry by Condorelli that exposes an almost complete absence of literature or theory of what constitutes "support".

This book is itself articulated as a supporting structure, a manual for engagement in and with its subject, which attempts both functionally and structurally to operate much like it." -- Foreword.

[A Healing Grove](#) Field Guide to Forest Plants of South-central Colorado
Staying with the Trouble

This book explores the challenges facing food security, sustainability, sovereignty, and supply chains in the Arctic, with a specific focus on Indigenous Peoples. Offering multidisciplinary insights and with a particular focus on populations in the European High North region, the book highlights the importance of accessible and sustainable traditional foods for the dietary needs of local and Indigenous Peoples. It focuses on foods and natural products that are unique to this region and considers how they play a significant role towards food security and sovereignty. The book captures the tremendous complexity facing populations here as they strive to maintain sustainable food systems - both subsistent and commercial - and regain sovereignty over traditional food production policies. A range of issues are explored including food contamination risks, due to increasing human activities in the region, such as mining, to changing livelihoods and gender roles in the maintenance of traditional food security and sovereignty. The book also considers processing methods that combine indigenous and traditional knowledge to convert the traditional foods, that are

harvested and hunted, into local foods. This book offers a broader understanding of food security and sovereignty and will be of interest to academics, scholars and policy makers working in food studies; geography and environmental studies; agricultural studies; sociology; anthropology; political science; health studies and biology.

Support Structures Routledge

A better and more complete understanding of family farms is urgently needed to guide policy makers' efforts towards achieving a number of Sustainable Development Goals (SDGs). This paper takes stock of the number of farms worldwide, and their distribution and that of farmland, on the basis of agricultural censuses and survey data. Thus, it shows that there are more than 608 million farms in the world. Rough estimates also indicate that more than 90 percent of these farms are family farms (by our definition) occupying around 70–80 percent of farmland and producing about 80 percent of the world's food in value terms. We underscore the importance of not referring to family farms and small farms (i.e., those of less than 2 hectares)

interchangeably: the latter account for 84 percent of all farms worldwide, but operate only around 12 percent of all agricultural land, and produce roughly 36 percent of the world's food. The largest 1 percent of farms in the world operate more than 70 percent of the world's farmland. The stark differences between family farms, in terms of size, their share in farmland distribution, and their patterns across income groups and regions, make clear the importance of properly defining different types of farms and distinguishing their differences when engaging in policy discourse and decision making towards the SDGs. The paper also considers evidence on labour and age provided by the censuses. There is a need to improve agricultural censuses if we want to deepen our understanding of farms.

Shelter Projects, 2008 Island Press

Using innovative interpretations of recent big budget films, *Coronavirus Capitalism Goes to the Cinema* interrogates the social, political and economic landscape during and prior to the COVID-19 crisis and provides lessons for advancing progressive politics in a post-pandemic age. By exploring numerous films including

Avengers: Endgame, *Once Upon a Time... In Hollywood*, *1917*, and *Parasite*, this short book provides a deep understanding about neoliberal society in a time of crisis. Facilitated by the ideas of Emma Goldman, Naomi Klein, Karl Marx, Noam Chomsky and many more, these movies are reinterpreted to point out our political blind spots, combat our non-COVID contagions and inoculate us into ideological herd immunity. From explorations of the supervillain-like decision-making of our political leaders to the inequalities in infection outcomes that sparked further Black Lives Matter protests, this book discusses the central social challenges we face today through the sights and sounds of some of the most beloved films of the very recent past. This entertaining and accessible book will reward readers who are interested in contemporary politics in the context of COVID-19, as well as cinephiles and movie-goers who want fresh interpretations of instant classics to help explain the world around them. More than just informative and amusing, this book is a call to action to those activists who want social change in the face of coronavirus

capitalism.

Restoring Natural Capital Food & Agriculture Org.

How can environmental degradation be stopped? How can it be reversed? And how can the damage already done be repaired? The authors of this volume argue that a two-pronged approach is needed: reducing demand for ecosystem goods and services and better management of them, coupled with an increase in supply through environmental restoration. *Restoring Natural Capital* brings together economists and ecologists, theoreticians, practitioners, policy makers, and scientists from the developed and developing worlds to consider the costs and benefits of repairing ecosystem goods and services in natural and socioecological systems. It examines the business and practice of restoring natural capital, and seeks to establish common ground between economists and ecologists with respect to the restoration of degraded ecosystems and landscapes and the still broader task of restoring natural capital. The book focuses on developing strategies that can achieve the best outcomes in the shortest amount of time as it: • considers

conceptual and theoretical issues from both an economic and ecological perspective • examines specific strategies to foster the restoration of natural capital and offers a synthesis and a vision of the way forward Nineteen case studies from around the world illustrate challenges and achievements in setting targets, refining approaches to finding and implementing restoration projects, and using restoration of natural capital as an economic opportunity. Throughout, contributors make the case that the restoration of natural capital requires close collaboration among scientists from across disciplines as well as local people, and when successfully executed represents a practical, realistic, and essential tool for achieving lasting sustainable development.

The Desktop Regulatory State Walter de Gruyter GmbH & Co KG

The Bloomsbury Handbook of Sound Art explores and delineates what Sound Art is in the 21st century. Sound artworks today embody the contemporary and transcultural trends towards the post-apocalyptic, a wide sensorial spectrum of sonic imaginaries as well as the

decolonization and deinstitutionalization around the making of sound. Within the areas of musicology, art history, and, later, sound studies, Sound Art has evolved at least since the 1980s into a turbulent field of academic critique and aesthetic analysis. Summoning artists, researchers, curators, and critics, this volume takes note of and reflects the most recent shifts and drifts in Sound Art--rooted in sonic histories and implying future trajectories. *Traditional Plant Foods of Canadian Indigenous Peoples* Duke University Press This updated second edition reference work looks at recent developments in the field internationally and in terms of new theories and practices.

Interest in community psychology, and its potential has grown in parallel with changes in welfare and governmental priorities. Critical Community Psychology provide students of different community based professions, working in a range of applied settings, at both undergraduate and postgraduate levels, with a text which will underpin their community psychological work. Key Features: Clear

learning objectives and chapter contents outlined at the start of each chapter Key terms highlighted with definitions, either as marginal notes or in chapter glossaries Case examples of community psychology in action Each chapter ends with a critical assessment section Discussion points and ideas for exercises that can be undertaken by the reader, in order to extend critical understanding Lists of further resources -- e.g. reading, film, electronic Authors are members of the largest community psychology departmental team in Europe Food Security in the High North Bloomsbury Publishing

In the midst of spiraling ecological devastation, multispecies feminist theorist Donna J. Haraway offers provocative new ways to reconfigure our relations to the earth and all its inhabitants. She eschews referring to our current epoch as the Anthropocene, preferring to conceptualize it as what she calls the Chthulucene, as it more aptly and fully describes our epoch as one in which the human and nonhuman are inextricably linked in tentacular practices. The Chthulucene, Haraway explains, requires sym-poiesis, or making-with, rather than auto-poiesis, or self-

making. Learning to stay with the trouble of living and dying together on a damaged earth will prove more conducive to the kind of thinking that would provide the means to building more livable futures. Theoretically and methodologically driven by the signifier SF—string figures, science fact, science fiction, speculative feminism, speculative fabulation, so far—Staying with the Trouble further cements Haraway's reputation as one of the most daring and original thinkers of our time. The Emerald Planet AK Press
 “A much-needed collection that thinks through power, desire, and human liberation. These pieces are sure to raise the level of debate about sexuality, gender, and the ways that they tie in with struggles against our ruling institutions.”?Roxanne Dunbar-Ortiz, *Outlaw Woman* “Against the austerity of straight politics, *Queering Anarchism* sketches the connections between gender mutiny, queer sexualities, and anti-authoritarian desires. Through embodied histories and incendiary critique, the contributors gathered here show how we must not stop at smashing the state; rather normativity itself is the enemy of all

radical possibility.”—Eric A. Stanley, co-editor of *Captive Genders* What does it mean to “queer” the world around us? How does the radical refusal of the mainstream codification of GLBT identity as a new gender norm come into focus in the context of anarchist theory and practice? How do our notions of orientation inform our politics?and vice versa? *Queering Anarchism* brings together a diverse set of writings ranging from the deeply theoretical to the playfully personal that explore the possibilities of the concept of “queering,” turning the dominant, and largely heteronormative, structures of belief and identity entirely inside out. Ranging in topic from the economy to disability, politics, social structures, sexual practice, interpersonal relationships, and beyond, the authors here suggest that queering might be more than a set of personal preferences?pointing toward the possibility of an entirely new way of viewing the world. Contributors include Jamie Heckert, Sandra Jeppesen, Ben Shepard, Ryan Conrad, Jerimarie Liesegang, Jason Lydon, Susan Song, Stephanie Grohmann, Liat Ben-Moshe,

Anthony J. Nocella, A.J. Withers, and more. Deric Shannon, C.B. Daring, J. Rogue, and Abbey Volcano are anarchists and activists who work in a wide variety of radical, feminist, and queer communities across the United States.

Therapeutic Landscapes OECD

Publishing

Architecture is the art and science of accommodating the lives we want to live. Our cities and buildings aren't givens; they are the way they are because that is as far as we have come to date. They are the best efforts of our ancestors and fellow planetizens, and if they have shortcomings, it is up to us to continue that effort, pick up where they left off. Bjarke Ingels Group's (BIG) grand mission is to find a pragmatic utopia, shaping not only a particular structural entity, but the kind of world we wish to inhabit. This book examines BIG's odyssey of architectural adaptation

Ethics in Design and Communication

Island Press

A unique book which reflects the multifaceted nature of sustainability by bringing together authors from interdisciplinary backgrounds. The book highlights the opportunities and challenges associated with applying sustainability indicators in different socio-cultural and geographical settings. It presents a range of possible solutions to common challenges associated with the use of indicators in practice.

From Conflict to Inclusion in Housing

Rowman & Littlefield

Now a major motion picture nominated for nine Academy Awards. Narrative of Solomon Northup, a Citizen of New-York, Kidnapped in Washington City in 1841, and Rescued in 1853. Twelve Years a Slave by Solomon Northup is a memoir of a black man who was born free in New York state but kidnapped, sold into slavery and kept in bondage for 12 years in Louisiana before the American Civil War. He provided details of slave markets in Washington, DC, as well as describing at length cotton cultivation on major

plantations in Louisiana.

The Bloomsbury Handbook of Sound Art CLAIRVIEW BOOKS

In recent years, the humanitarian community has looked inward, learning from their past experiences in providing emergency shelter for the ever-increasing number of populations suffering from crises worldwide. The humanitarian reform process has helped widen the community of practitioners, reinforced global and country-based coordination systems, and required the agencies concerned to seek new and better means of ensuring integrated and robust humanitarian programming. This publication is an example of a series of learning tools being produced to support improved response to crises. It has been developed by the Emergency Shelter Cluster through a group of agencies within the cluster led by UN-HABITAT. It contains summaries of a range of experiences applied in crisis situations, and an honest appraisal of their successes and failures.
