From EL Education comes a proven approach to student assessment. Leaders of Their Own Learning offers a new way of thinking about assessment based on the celebrated work of EL Education schools across the country. Student-Engaged Assessment is not a single practice but an approach to teaching and learning that equips and compels students to understand goals for their learning and growth, track their progress toward those goals, and take responsibility for reaching them. This requires a set of interrelated strategies and structures and a whole-school culture in which students are given the respect and responsibility to be meaningfully engaged in their own learning. Includes everything teachers and school leaders need to implement a successful Student-Engaged Assessment system in their schools. Outlines the practices that will engage students in making academic progress, improve achievement, and involve families and communities in the life of the school. Describes each of the book's eight key practices, gives advice on how to begin, and explains what teachers and school leaders need to put into practice in their own classrooms. Ron Berger is Chief Program Officer for EL Education and a former public school teacher. Leaders of Their Own Learning shows educators how to ignite the capacity of students to take responsibility for their own learning, meet Common Core and state standards, and reach higher levels of achievement. DVD and other supplementary materials are not included as part of the e-book file, but are available for download after purchase.

Diving tourism has seen such growth in the past decade that the World Tourism Organization suggests it will soon become as important as ski tourism. According to a WTO estimate, there are now 5-7 million active certified divers in the world. Despite its development as a mass tourism activity, its dynamic growth and great economic importance, particularly for island destinations in the tropics, surprisingly few scientific publications address this form of special-interest tourism. In the light of this, "New Frontiers in Marine Tourism" is the first attempt to describe and analyse this tourism sector comprehensively. The first part of the book is devoted to an overview of the dive sector, addressing different types of diving locations and their particular characteristics, the geographical distribution of dive locations, the origins of dive tourists, as well as the growth and economic significance of diving tourism in destinations worldwide. In its second section, the book outlines different motivations and typologies of diving tourists, their learning behaviour, knowledge of marine environments, and their interaction with flora and fauna. The third section focuses on diver satisfaction, attitudes and preferences, diver education and interpretation, compliance with regulations by divers and tour operators, environmental impacts, and aspects of risk and health, thus highlighting a variety of pressing topics related to the management of diving tourism. * First book of its kind to address the rapidly growing area of diving tourism * Contributions from academic experts in the field, it addresses hot issues such as environmental impacts, health and safety, education, and economic factors and impacts. * Brilliantly edited, it represents a coherent and cohesive collection of critically important issues in this area.

This book is written to show how our lives can be radically changed in One Day. Do you believe your life could change in one day? What are you believing for? We know that in God's timing things can change in an instant, but we will look at those who woke up normally and at the end of the day their lives were totally transformed. There are many of us who are living in the hope that our lives would change for the better. We have been praying, fasting and believing for change but as time passes by we do not see any change. When God interrupts your Day you must be willing to surrender to His will. You must be willing to commit to Him and His assignment. God will use your talents and abilities, but He will use you even if you have no talents at all. You must be willing to allow God to use what little or much you have. It's not how much or how little you have, it is how committed you are! You and God can do anything!

"Crammed with color photos, Ritter's scientific anthem to the shark explains why fear of the creatures is misplaced, countering scare stories with detailed information about shark biology and behavior. He notes that humans kill an estimated 200 million sharks each year; he pleads for greater understanding and respect for sharks at a time when many species are threatened with extinction. Ritter is scientific director of the Shark Project, based in Germany, and is associated with the Shark Research Institute in Princeton, New Jersey, and the Shark Education and Research Center in the Bahamas." -- Publisher.

The wonderful world below the surface of the ocean is alive with exotic creatures and plant life. It is colorful, funny, awe-inspiring

and beautiful. Just observing some of the every-day behaviors of fish, octopus, sharks, or rays can be a treat. Scuba diving has been a passion for the author ever since her father told her about his dive trips. It opened an exciting underwater world for her and if you have ever considered scuba diving, getting certified is fun and challenging. You can explore and have adventures in the seas and travel the world too.

SCUBA is a fun, relaxing, educational, interesting, and -- if approached properly -- safe activity, it is nonetheless a sport that has risks. SCUBA diving is in fact an extreme sport that can injure or even kill very quickly, and in some very nasty ways. What we are doing is entering an alien environment that is normally hostile to human life. We cannot breathe in water without some kind of mechanical assistance. These are facts and the details should be covered in every Open Water (OW) class. All too often in today's society, however, people do not want to take the time to properly prepare and get the education to safely take on new tasks. Some agencies appear to have responded to this by developing training programs that turn out high numbers of certified divers in shorter time frames, necessitating the reduction of time spent on what I consider to be some necessary basic skills. While this has resulted in great numbers of new divers entering the water, it has not resulted in many of those divers staying in the water. New divers are often given just enough training to enable them to dive in the most benign conditions under close supervision. Even then, there are still those who find out their initial training was just not adequate. It is at this point that they either make the decision to get more training or they leave the sport. The latter happens all too often. The former, when it does happen, does not always occur for the right reasons. Students should return to training to expand their diving and learn new skills; they should not have to return for new training just to be able to enjoy the sport safely. To require students to come back for basic information is something I find very troubling, and in some cases, has actually cost divers their lives. A lack of rescue instruction has resulted in a number of diver deaths when buddies did not know how to drop weights,

support a diver at the surface, or even stay in contact with their buddy. This is another area frequently talked about, but all too often not actually put into practice. The concept of always diving with a buddy and just what that means in the "real world" is often given too little attention. Unfortunately, it is impossible to foresee every conceivable situation that can arise, but there are many basic issues that can be covered. The following chapters will hopefully address much of what is being overlooked or delayed in many programs as they exist today. It is my hope that this information also finds its way into the hands of those who have not yet begun the training process. I have included a chapter on how to select an instructor based on the quality of instruction and the content of the course. In some cases, these classes may cost more than the less comprehensive courses also available, but usually they do not. In fact, when you consider the additional skills and education gained from a more comprehensive course, you will find that you have received much more value for each dollar spent. In addition, you gain priceless benefits in the form of greater confidence, enjoyment, skills, and -- most importantly -- safety. Enjoy and dive safe

With the advent of genetic testing there has been a revival in marine taxonomy. The 25th Anniversary 4th Edition reflects the many recent changes including 89 new fish species and more than 200 additional photographs. The field guide now includes 683 species documented in more than 1000 underwater photographs, representing a significant update to the 2002 3rd edition. The most comprehensive and beautiful visual ID reference published for the region features an easy-to-use quick reference format. *Reef Fish Identification Florida Caribbean Bahamas* first appeared in 1989 and has since revolutionized fishwatching. The first edition had 288 pages and 345 color photographs. The success of our first publication launched a series of marine life identification books for the Galapagos Islands, the West Coast of the United States, the Gulf of California to Panama and the Tropical Pacific.

Building on his first book, "SCUBA: A Practical Guide for the New Diver", James Lapenta addresses what is most often the next step in diver training. Advanced Level or Advanced Open Water training is often taken by divers to gain additional skills and

knowledge. It is also taken to allow them to gain access to more challenging dives and dive sites. These also pose a greater degree of risk to the individual. Unfortunately some advanced classes are no more than a "taste" or "tour" of advanced level dives. The divers do not get the new knowledge and skills required to safely embark on these dives. In order to safely pursue these dives James has outlined the steps to take to reduce the risk of injury and worse. From describing the dives to offering advice on the content one should expect, as well as selecting an instructor, he offers new and not so new divers guidance.

Additional sections on equipment options, air supply management, dive planning, and dive selection for maximum learning potential are looked at. Also included is a section on a subject often overlooked in recreational SCUBA diving - the after-effects of a diving accident and rescue/recovery on the rescuer and witnesses to the event. Post Traumatic Stress in Recreational Dive Rescues is a real possibility and one that must be looked at when executing dives with greater risk. Safety in training and after training is the heart of this work and the driving force behind its publication. James has experienced the best in training and that which left something to be desired. He gives examples of both throughout the work. If you do not have his first book, it is highly recommended that you also acquire it as a companion to this one. While they do contain some sections of the same information, there are sections in the first book that are not included in this that are highly beneficial.

How to scuba dive? How to get my scuba diving certification? Start off on the right fin! If you are not a diver yet, grab this in-depth handbook! It is everything you need to know about diving and scuba certification in a step-by-step beginner's guide. If you are a newly certified scuba diver and do not yet feel safe & comfortable underwater, this guide will show you how to become as comfortable underwater as you are when sitting on your couch.

If you are a scuba diving instructor, this reference book will provide a quality framework to use with your open water divers to prepare them for a lifetime of legendary underwater experiences. *** Regardless of your reason for wanting to learn to dive, chances are you won't go scuba diving after completing your open-water certification. Weird, right? There are "holes" in the way scuba diving instructors teach, and this handbook will lay it bare so you can prepare to learn to dive and get what you need for a lifetime of legendary underwater adventures. *** Recommendations are backed by industry-wide surveys that the author shares with you. He also explains ISO international scuba diving training standards so you can prepare and know if you are being short-changed. This step-by-step handbook to learning to dive covers scuba certification courses, dive equipment & dive travel with 550+ pages of actionable information. - Should I get a PADI certification or go with another dive training agency? - How much does it cost to learn to dive? How can I save money? - How can I get comfortable underwater? - What can I do to feel & be safe while scuba diving? - What are the scuba certification levels & which ones matter to me? - Typical mistakes made by people who decide to learn to dive. - The pitfalls & traps in the dive industry. How to avoid them. - Where to take your certification and with whom. - Selecting a dive instructor, dive center, dive resort & dive boat. - Your health & fitness to dive. - What dive gear to buy & what to rent. - How to save money by spending on what will actually help you. - And so much more! Most books about scuba diving are written by instructors with good content. But Darcy Kieran gives you a 360-degree view from his experience as a scuba diving instructor trainer & owner/manager of dive shops, dive equipment wholesalers, dive boats, scuba diving university programs, and dive resorts. *** This handbook won't teach you how to scuba dive - you must get in the water for that! But you will know exactly what to do before registering for a scuba certification course. The author shares typical mistakes that would cost you time and money and, in many cases, provide you with such a bad experience that you would want to stop scuba diving. This book gives you a chance to learn from others' mistakes! It will help you understand how the dive industry operates so you can navigate it to your advantage. Do not risk missing out on a lifetime of legendary scuba diving adventures because many dive professionals you'll encounter are not always

professional. Instead, learn how to be the leader of your own adventure!
