 Written for the short course--where content must be thorough but to-the-point--Fundamentals of Organic Chemistry provides an effective, clear, and readable introduction to the beauty and logic of organic chemistry. McMurry presents only those subjects needed for a brief course while maintaining the important pedagogical tools commonly found in larger books. With clear explanations, thought-provoking examples, and an innovative vertical format for explaining reaction mechanisms, Fundamentals takes a modern approach: primary organization is by functional group, beginning with the simple (alkanes) and progressing to the more complex. Within the primary organization, there is also an emphasis on explaining the fundamental mechanistic similarities of reactions. Through this approach, memorization is minimized and understanding is maximized.

This book documents the massive deprivation of human rights resulting from governmental censorship, manipulation, and control of reproductive health and sexuality information. The introductory chapter applies a human rights perspective to reproductive health to show that women must have full and impartial information to be able to choose services which further their goals rather than governmental policies. Examples of different types of state manipulation are provided, and demographic, biomedical, and reproductive health paradigms of contraceptive delivery programs are described. Chapter 2 identifies the binding obligations imposed on governments by the international principle that women have a right to appropriate reproductive health information. The third chapter provides a global overview of such topics as health expenditures, fertility rates, infertility, literacy and education, infant and child mortality, maternal mortality, child spacing, contraceptive usage, unmet need, abortion, HIV/AIDS, and sexually transmitted diseases (STDs). Chapters 4-13 present country reports for Algeria, Brazil, Chile, Ireland, Kenya, Malawi, Pakistan, the Philippines, Poland, and the US. The country reports reveal the overwhelming need of women to have access to this information and the innumerable

ways in which governments control such access. The country reports also describe factors such as religion, culture, tradition, state of development, and influence of foreign donors which have an impact on access to information. Each country report ends with specific recommendations, and the concluding chapter defines seven obligations of national governments imposed by the right to information contained in international law and contains recommendations of ways nongovernmental organizations can use these obligations to lobby governments for improvements.

The Third Edition of this widely adopted textbook has been thoroughly revised and offers an authoritative and up-to-date coverage of the key theories, concepts and issues in social policy. The lively and readable text has been designed to provide students with the essential tools to gain a clear understanding of the theoretical debates surrounding the discipline. The book is organized into three parts: • Part One offers a detailed but accessible critique of major theoretical approaches such as neo-liberalism, Marxism, feminism and racism; • Part Two explores conceptual debates such as distributive justice and postmodernism; • Part Three engages with contemporary social policy issues such as children, pensions and the role of New Labour. It also features newly commissioned chapters to reflect recent developments and current debates within social policy. New areas of consideration include: • Citizenship • Post-structuralism • The politics of food • Globalization Student exercises and reading lists feature throughout the text and practical examples are skilfully used to illustrate conceptual and theoretical material, making it the ideal core textbook for undergraduate social policy students, as well as those studying related welfare modules across the social sciences.

"Positive Behavior Support (PBS) - it's already been highly effective in schools and community programs across the country, and it can transform family life, too. This is the practical guide parents need to bring PBS into the home. Developed by parents and professionals with extensive experience in PBS, Parenting with Positive Behavior Support introduces this creative problem-solving approach to behavior and translates the research behind PBS into concrete strategies every parent can understand and use. Parents will get easy-to-follow guidelines for identifying behaviors of concern, understanding the reasons behind the behaviors, and effectively intervening through three basic methods: preventing problems, replacing behavior, and

managing consequences. A must-have resource for families and the professionals who support them!"--BOOK JACKET.

The remarkable story of the Algebra Project, a community-based effort to develop math-science literacy in disadvantaged schools—as told by the program's founder “Bob Moses was a hero of mine. His quiet confidence helped shape the civil rights movement, and he inspired generations of young people looking to make a difference”—Barack Obama At a time when popular solutions to the educational plight of poor children of color are imposed from the outside—national standards, high-stakes tests, charismatic individual saviors—the acclaimed Algebra Project and its founder, Robert Moses, offer a vision of school reform based in the power of communities. Begun in 1982, the Algebra Project is transforming math education in twenty-five cities. Founded on the belief that math-science literacy is a prerequisite for full citizenship in society, the Project works with entire communities—parents, teachers, and especially students—to create a culture of literacy around algebra, a crucial stepping-stone to college math and opportunity. Telling the story of this remarkable program, Robert Moses draws on lessons from the 1960s Southern voter registration he famously helped organize: “Everyone said sharecroppers didn't want to vote. It wasn't until we got them demanding to vote that we got attention. Today, when kids are falling wholesale through the cracks, people say they don't want to learn. We have to get the kids themselves to demand what everyone says they don't want.” We see the Algebra Project organizing community by community. Older kids serve as coaches for younger students and build a self-sustained tradition of leadership. Teachers use innovative techniques. And we see the remarkable success stories of schools like the predominately poor Hart School in Bessemer, Alabama, which outscored the city's middle-class flagship school in just three years. *Radical Equations* provides a model for anyone looking for a community-based solution to the problems of our disadvantaged schools.

*Researching The Powerful In Education* SAGE

This book urges teachers - as both producers and consumers of knowledge - to engage in the debate about educational research by undertaking meaningful research themselves. Teachers are now being encouraged to carry out research in order to improve their effectiveness in the classroom, but this book suggests that they also reflect on and challenge the reductionist and technicist methods that promote a 'top down' system of education. The author, a leading proponent of qualitative research, argues that

only by engaging in complex, critical research will teachers rediscover their professional status, empower their practice in the classroom and improve the quality of education for their pupils. Postgraduate students of education and experienced teachers will find much to inspire and encourage them in this book. Updated and revised for this new edition, it retains both its clarity and insistence on sound research practice. Joe L. Kincheloe is Professor of Education at the City University of New York Graduate Center and Brooklyn College. he is the author and editor of many books on critical pedagogy and qualitative research in education. Series Editor: Ivor F. Goodson.

*Understanding Social Security (Second Edition)* Routledge  
James Midgley provides a broad overview of social welfare, outlining key institutions, terminology, historical research, and approaches. He also details reasons for the existence of international social welfare and the challenges that arise from it. The author includes an important section on applied international social welfare that addresses the concerns of practitioners--concerns that have been neglected in much of the literature in the field. An entire section of the book is devoted to issues of social work practice, social developments, the activities of international agencies, and their collaborative efforts. While practical application is an important focus of the book, several chapters deal with key theoretical debates in the field. The author also includes descriptive chapters that provide comprehensive accounts of world social conditions and social welfare institutions.

In this compassionate and moving guide to communicating with the terminally ill, Dr. Elisabeth Küebler-Ross, the world's foremost expert on death and dying, shares her tools for understanding how the dying convey their innermost knowledge and needs. Expanding on the workshops that have made her famous and loved around the world, she shows us the importance of meaningful dialogue in helping patients to die with peace and dignity.

*Social Science and Policy-Making* Polity

First published in 1972, *The Hope of Progress* presents collection of essays and lectures dealing with the history of scientific ideas and the impact of science on society. The principle piece in this volume is the author's 1969 presidential address to the British Association 'On The Effecting of All Things Possible', an argument for believing in the ability of science to solve the problems it has itself created, and which too many of us believe insoluble. It contains author's Romanes Lecture on 'Science and Literature' and a well known critique of J.D. Watson's notorious account of the discovery of the molecular structure of DNA, The Double Helix. Other chapters discuss the possibility of the control and domination by science of the body and mind of Man- though the author concludes in 'The Genetic Improvement of Man' : 'I think that, in the main, for many centuries to come, we shall have to put up with human beings as they are at present constituted'. This book will be useful for scholars and researchers of history of science, philosophy of science, natural science, and philosophy in general.

Algebra has been developing through the interaction between the investigation of its own algebraic structures and its applications to different areas of Mathematics and other branches of Science.

This informative research volume consists of survey and original articles by reputed algebraists which are refereed by the experts in the relevant fields. The survey articles provide an excellent overview of the various areas of research in Algebra. The original articles by reputed algebraists in Ring Theory, Module Theory, Semigroup Theory, Lattice Theory, Category Theory, Derivations, Hyper and Fuzzy Structures etc. exhibit new ideas, tools needed for the successful applications and discuss new techniques and methodologies for current research in different branches of Algebra. Over 300 bibliographic references make Algebra and its Applications: Recent Developments an indispensable resource book for the beginners and advanced experts in Algebra.

As a result of the writings of Foucault, surveillance has come to be seen as a phenomenon of major importance in modern societies. But there are few, if any, studies which relate the concept of surveillance to that of bureaucracy, thus connecting Foucault to Max Weber. Dandeker's text breaks new ground in re-examining the framework of Weber's analysis of bureaucracy in the light of problems of surveillance. The author also provides a critique of a variety of other theories of the significance of bureaucracy in the modern world. The core of the book is concerned to offer a detailed analysis of the use of bureaucratic surveillance in the state and the economy. The author gives particular attention to the role of warfare in the expansion of surveillance. The text brings together problems that ordinarily are treated in substantial separation from one another, including analyses of staff and line in organization theory, military service and the formation of prisons and asylums.
