Education and Gender draws on international research from the USA, the UK, India, Mexico, Sub-Saharan Africa and the Caribbean, to provide a comprehensive global overview of the relationship between gender and education. Rooting constructions of gender and sexuality in specific geographical contexts, the contributors consider a range of issues. Themes discussed include the gender gap in educational attainment; pedagogical strategies; stereotyping in curricula; and education policy. Drawing on best practices worldwide, the contributors identify the current gaps and propose solutions to promote gender-just, equitable and pluralistic societies. Each chapter includes key questions to encourage active engagement with the subject and a list of further reading to support taking the exploration further.

More than two billion people worldwide have currently no access to grid electricity or other efficient energy supply. This is one third of humanity and the majority live in rural areas. The productivity and health of these people are diminished by reliance on traditional fuels and technologies, with women and children suffering most. Energy is the key element to empower people and ensure water, food and fodder supply as well as rural development. Therefore access to energy should be treated as the fundamental right to everybody. Renewable energy has the potential to bring power, not only in the literal sense, to communities by transforming their prospects. This book offers options that meet the needs of people and communities for energy and engage them in identifying and planning their own provision. It describes updated renewable energy technologies and offers strategies and guidelines for the planning and implementation of

sustainable energy supply for individuals and communities.

Timber Press (OR) This book is a complete modern guide to sheet metal forming processes and die design - still the most commonly used methodology for the mass-production manufacture of aircraft, automobiles, and complex high-precision parts. It illustrates several different approaches to this intricate field by taking the reader through the 'hows' and 'whys' of product analysis, as well

as the techniques for blanking, punching, bending, deep drawing, stretching, material economy, strip design, movement of metal during stamping, and tooling.

Abstract: Open shelf-life dating means the use of comprehensible terms such as day, month, and year as an indication of when food was packaged or by when it should be used or sold. A survey revealed that 96 percent of consumers were concerned about food freshness; however, their awareness and comprehension of open dates varied considerably. The benefits of open dating concern food quality, nutrition, food safety, inventory, and education. The types of open dates are: date of pack or manufacture, pull date or sell-by date, best-if-used-by date, expiration or use-by date, or combination of the first four. Food shelf-life is dependent on time and environmental factors. The three alternative open dating systems are: voluntary, mandatory, and voluntary/mandatory. Enforcement and liability would depend on the system used, but Federal and state inspection systems would routinely survey the market. Various congressional options for open dating as well as technical information and the status

of open dating in foreign countries are discussed.

Published in Indonesia in 2005, *The Rainbow Troops*, Andrea Hirata's closely autobiographical debut novel, sold more than five million copies, shattering records. Now it promises to captivate audiences around the globe. Ikal is a student at the poorest village school on the Indonesian island of Belitung, where graduating from sixth grade is considered a remarkable achievement. His school is under constant threat of closure. In fact, Ikal and his friends—a group nicknamed the Rainbow Troops—face threats from every angle: skeptical government officials, greedy corporations hardly distinguishable from the colonialism they've replaced, deepening poverty and crumbling infrastructure, and their own low self-confidence. But the students also have hope, which comes in the form of two extraordinary teachers, and Ikal's education in and out of the classroom is an uplifting one. We root for him and his friends as

they defy the island's powerful tin mine officials. We meet his first love, the unseen girl who sells chalk from behind a shop screen, whose pretty hands capture Ikal's heart. We cheer for Lintang, the class's barefoot math genius, as he bests the students of the mining corporation's school in an academic challenge. Above all, we gain an intimate acquaintance with the customs and people of the world's largest Muslim society. This is classic storytelling in the spirit of Khaled Hosseini's *The Kite Runner*: an engrossing depiction of a milieu we have never encountered before, bursting with charm and verve.

Food Storage Stability addresses one of the foremost problems faced by food processors - how to stabilize food once it is harvested. Using a holistic approach, the book discusses the changes responsible for food quality deterioration and considers strategies for minimizing or eliminating these degradative changes. Topics include: consumer perceptions and preferences, cellular changes, conversion of major constituents to more stable products, the effect of color and texture, packaging issues,

and practical strategies for storing foods frozen, chilled, or at ambient temperature. Food Storage Stability is the only treatment of this subject that covers the diverse factors that influence quality retention in foods and integrates basic concepts in storage stability with practical applications. Food scientists and technologists concerned with changes in food quality are interested in ensuring that safe and appealing food products reach consumers - this is the book that will assist them with that important goal.

Indonesia merupakan Negara dengan kekayaan sumberdaya alam hayati yang melimpah.

Sumberdaya alam yang ada berpotensi untuk dikembangkan demi kelangsungan makhluk hidup. Banyak kekayaan alam yang potensial belum dimanfaatkan dengan baik. Hal ini dapat disebabkan oleh pengetahuan yang kurang dari masyarakat. Salah satu sumberdaya alam hayati yang potensial adalah kelapa. Kelapa

telah lama dikenal memiliki banyak manfaat, yaitu salah satunya adalah bagi kesehatan. Produk yang dihasilkan dari kelapa masih dalam jumlah terbatas. Produk

dari bahan dasar kelapa dipasarkan masih dalam bentuk produk primer. Kondisi tersebut menyebabkan produk sekunder dan tersier kelapa sangat perlu untuk ditingkat dalam bentuk
