Developing Core Literacy Proficiencies, Grade 8 Oxford University Press

The Developing Core Literacy Proficiencies program is an integrated set of English Language Arts/Literacy units spanning grades 6-12 that provide student-centered instruction on a set of literacy proficiencies at the heart of the Common Core State Standards (CCSS). Reading Closely for Textual Details Making Evidence-Based Claims Making Evidence-Based Claims about Literary Technique (Grades 9-12) Researching to Deepen Understanding Building Evidence-Based Arguments The program approaches literacy through the development of knowledge,

literacy skills, and academic habits. Throughout the activities, students develop their literacy along these three paths in an integrated, engaging, and empowering way. Knowledge: The texts and topics students encounter in the program have been carefully selected to expose them to rich and varied ideas and perspectives of cultural significance. These texts not only equip students with key ideas for participating knowledgeably in the important discussions of our time, but also contain the complexity of expression necessary for developing college- and career-ready literacy skills. Literacy Skills: The program articulates and targets instruction and assessment on twenty CCSS-aligned literacy skills ranging from “making inferences” to “reflecting critically.” Students focus on this set of twenty skills throughout the year and program, continually applying them in new and more sophisticated ways. Academic Habits: The program

articulates twelve academic habits for students to develop, apply, and extend as they progress through the sequence of instruction. Instructional notes allow teachers to introduce and discuss academic habits such as “preparing” and “completing tasks” that are essential to students’ success in the classroom. The program materials include a comprehensive set of instructional sequences, teacher notes, handouts, assessments, rubrics, and graphic organizers designed to support students with a diversity of educational experiences and needs. The integrated assessment system, centered around the literacy skills and academic habits, allows for the coherent evaluation of student literacy development over the course of the year and vertically across all grade levels.

In *Unlocking the Power of Academic Vocabulary*, Dr. Yu Ren Dong, an associate professor of English education at Queens College, City University of New York, helps secondary teachers expand their instructional repertoire to teach academic vocabulary in a systematic, meaningful, contextualized, and exciting way. Every secondary, subject-matter teacher will find strategies, easy-to-

integrate activities, and tips on selecting words and planning lessons. As you teach with these strategies, your English language learners will be able to: tap into prior knowledge through cross-language transfer and cross-cultural comparisons; use concept-based vocabulary, such as analogies, metaphorical language, themes, sources, inquiry, and graphic organizers; interact with new words in context to decipher euphemisms, words with multiple meanings, connotation, and context clues; engage in interactive read-alouds, think-alouds, and wordplay; and master vocabulary through writing. Charts, student examples, suggested resources, and subject-matter vocabulary lists give teachers the hands-on tools they need to teach the concepts behind words as well as the actual definitions, spelling, and sounds. Transform your academic vocabulary instruction into an engaging, skill-building mix that carries over into students’ reading, writing, thinking, and conversations in all subject areas. *Developing Core Literacy Proficiencies, Grade 7* Corwin Press

The Knowledge Gap Guilford Publications

The 4 Point series is designed for English language learners whose primary goal is to succeed in an academic setting. Academic English learners need skills-based books that focus on reading, listening, and speaking, as well as the two primary language bases of vocabulary and grammar. The ultimate goal is to help your students improve these skills and earn a 4.0 (GPA). The Introduction to English for Academic Purposes (EAP) level is designed for students in academic programs who need a more general introduction to authentic academic content. The discrete skills volumes are designed for programs and courses that want to more intensively focus on key strategies and authentic academic content in one skill area. Each 4 Point volume covers academic skills while providing reinforcement and systematic recycling of key vocabulary issues and further exposure to grammar issues. These volumes focus very heavily on vocabulary because language learners know that they are way behind their native-speaker counterparts when it comes to vocabulary. Each

book highlights key vocabulary items, including individual words, compound words, phrasal verbs, short phrases, idioms, metaphors, collocations and longer set lexical phrases. Speaking for Academic Purposes is an introductory textbook containing English for Academic Purposes content. Each unit includes activities to strengthen a range of speaking skills, notably: understanding classroom discourse, using academic language functions, recognizing signal words and phrases, and synthesizing information. These activities are presented within the context of one field of academic study (Architecture, Marketing, Earth Science, U.S. History, Chemistry, and Fine Arts) per unit. Unique to this speaking text are six videos showing common student interactions. Access to the videos is free. Each unit includes three academic speaking strategies (including one specific to making presentations) and tasks that involve participating in group discussions, interacting with native speakers, and making a presentation. The goal is to provide students with a variety of strategies/tools to master academic situations in which they need to participate.

Speaking for Academic Purposes HEINLE CENGAGE LEARNING
The Language of Science Education: An Expanded Glossary of Key Terms and Concepts in Science Teaching and Learning is written expressly for science education professionals and students of science education to provide the foundation for a shared vocabulary of the field of science teaching and learning. Science education is a part of education studies but has developed a unique vocabulary that is occasionally at odds with the ways some terms are commonly used both in the field of education and in general conversation. Therefore, understanding

the specific way that terms are used within science education is vital for those who wish to understand the existing literature or make contributions to it. The Language of Science Education provides definitions for 100 unique terms, but when considering the related terms that are also defined as they relate to the targeted words, almost 150 words are represented in the book. For instance, "laboratory instruction" is accompanied by definitions for openness, wet lab, dry lab, virtual lab and cookbook lab. Each key term is defined both with a short entry designed to provide immediate access following by a more extensive discussion, with extensive references and examples where appropriate. Experienced readers will recognize the majority of terms included, but the developing discipline of science education demands the consideration of new words. For example, the term blended science is offered as a better descriptor for interdisciplinary science and make a distinction between project-based and problem-based instruction. Even a definition for science education is included. The Language of Science Education is designed as a reference book but many readers may find it useful and enlightening to read it as if it were a series of very short stories.
