Over 700 entries, from short essays to brief definitions of key terms and concepts, have been contributed by leading clinicians and medical ethicists. *Getting Hooked* BMJ Books Adult ADHD: Diagnostic Assessment and Treatment, Third Edition covers not only diagnostic assessment, but also comorbidity patterns as well as differential diagnosis of

ADHD with for example bipolar disorder and borderline personality disorder. The symptom overlap and misdiagnosis of chronic fatigue syndrome in girls and women with the inattentive subtype of ADHD, ADD is explored. The chronic delayed sleep phase syndrome associated with ADHD based on disturbances in the circadian rhythm, and the possible consequences

for general health (obesity, diabetes, cardiovascular diseases and cancer) are discussed. There are sections on ADHD and intelligence, criminality, sexuality, dyslexia and autism. Adult ADHD can be treated effectively but as yet the disorder is not always recognised by professionals and this book aims to help correct this. Diagnostic tools are included, such as the structured

<p>Diagnostic Interview for Adult ADHD (DIVA), and an ultra-short and somewhat longer screening tool, all based on the DSM-IV criteria for ADHD. Treatment options cover psychoeducation and motivation and individual and group coaching; long-acting stimulants and other new drugs for treating ADHD; use of melatonin to treat the delayed sleep-phase disorder. Useful</p>	<p>information is included on the setting up and organisation of a department for adult ADHD with a multidisciplinary team. References, websites and useful international addresses have all been updated. Adult ADHD: Diagnostic Assessment and Treatment, Third Edition is intended for students, junior doctors/residents, psychologists, psychiatrists, other mental</p>	<p>healthcare professionals and interested parties and provides a quick overview of the current state of the science and of the methods used in diagnosis and treatment. new ground in May of 2013, designating a new disorder called "behavioral addiction." Clinicians immediately wanted to know: how is a behavioral addiction different from an impulse control disorder? What are the criteria for determining that some behaviors are addictions rather than impulses? What, if anything, does this mean in terms of effective treatment? Behavioral Addictions is the first and most authoritative text ever written on the subject of behavioral addictions. This comprehensive work explains the criteria used to determine addiction, the evidence for identifying assorted behaviors as addictions, and the evidence-based treatment for each. With contributions from preeminent experts covering an exhaustive list of behavioral addictions, this book is unique in its coverage of behavioral addictions, their criteria, and treatment. It is a valuable and timely resource for any clinician treating addictions. I letterati, che non siano poeti, cioè scrittori stringati, si dividono in narratori e saggisti. E' facile scrivere "C'era una volta...." e parlare di cazzate con nomi di fantasia. In questo modo il successo è assicurato e non hai rompiballe che si sentono diffamati e che ti querelano e	che, spesso, sono gli stessi che ti condannano. Meno facile è essere saggisti e scrivere "C'è adesso...." e parlare di cose reali con nomi e cognomi. nostri avi. Insomma, siamo bravi a farci del male e qualcuno deve pur essere diverso! Resoconti delle discussioni SCB Distributors “There must be a revolution in our thinking,” declares the author, J. Krishnamurti (1895-1986), who remains one of the greatest philosophers and teachers of modern times. In this series of lectures, given in the U.S. and various cities

throughout the world in the 1950s, he again confronts the habitual, projection-making mind, which fails to see what is while it absorbs itself in belief and illusion. Topics covered in these essays include: the process of change at all levels; the development of discipline; quieting the mind; self-awareness; and freedom from slavery to mind. While we humans are constantly making superficial

modifications of our circumstances, such gestures never lead to a radical transformation characterized by clarity, lack of prejudice, spontaneity, genuine peace and happiness. People would rather line up behind some leader, or a particular religious teaching, following the dictates of some outside authority, than to think for themselves, Krishnamurti explains. Sadly, “most

of our existence is spent in that way—trying to live up to something, trying to bring about a change in our attitude, to change according to the pattern which we have projected as an ideal, as a belief.” Only by rigorous self-observation and self-questioning is there any hope that humankind will overcome its blindness and self-obsession enough to bring about an end of

violence, war and other misery on this beleaguered planet.

effort of research and understanding. This book gives us the courage to bypass disease notions to deal with intrapsychic, family system, and social and cultural dynamics in addiction. ?David Cook, Counseling and Psychological Services, University of Wisconsin This compelling and controversial book challenges the widely accepted belief that alcohol and drug addiction

have a genetic or biological basis. The so-called disease theory suggests that a substance or activity can cause the addict to lose control of his behavior. Stanton Peele demonstrates how this notion fails to make sense of scientific observations. Analyzing studies of drug and cigarette addiction, alcoholism, obesity, and other potential compulsions such as running and sex, Peele reveals the

surprising frequency of self-cure as part of the evidence. The author finds that compulsive habits and dependencies are a way of coping that individuals can reverse as their life circumstances change. This brilliantly argued book is sure to provoke discussion and stimulate new approaches to treatment. **The Natural History of Alcoholism Revisited** Bur The essays in this volume offer a

thorough discussion of the relationship between addiction and rationality. This book-length treatment of the subject includes contributions from philosophers, psychiatrists, neurobiologists, sociologists and economists. Contrary to the widespread view that addicts are subject to overpowering and compulsive urges, the authors in this volume

demonstrate that addicts are capable of making choices and responding to incentives. At the same time they disagree with Gary Becker's argument that addiction is the result of rational choice. The volume offers an exposition of the neurophysiology of addiction, a critical examination of the Becker theory of rational addiction, an argument for a 'visceral theory of addiction', a

discussion of compulsive gambling as a form of addiction, several discussions of George Ainslie's theory of hyperbolic discounting, analyses of social causes and policy implications, and an investigation of the problem of relapse.

FrancoAngeli Well known for providing a thorough yet concise view of the natural history of psychiatric disorders, this popular text

has been completely updated chapter by chapter in this Fifth Edition. Terminology has been revised in line with DSM IV and many recent genetic and neurobiological findings have been included. Some of the areas where there is new material are: genetics and neuroimaging of schizophrenia, combined use of benzodiazepines and neuroleptics in treating schizophrenia, development

of antisocial personality, neuropsychological changes in AIDS patients, genetics of Alzheimer's disease, prognosis for delirium in the elderly, and epidemiology of anorexia nervosa. As in previous editions, each chapter systematically covers the definition, historical background, epidemiology, clinical picture, natural history, complications, family studies, differential diagnosis, and

clinical management of each disorder. The use of follow-up studies to classify psychiatric disorders is emphasized. No other text provides such a lucid, well-documented and critically sound overview of the major syndromes in psychiatry. Medical students and psychiatric residents will continue to find Psychiatric Diagnosis a unique guide to the field. *The Cabaret of Plants: Forty*

Group psychotherapy is a user-friendly guide to conducting group psychotherapy in various settings and with different populations. It has been designed as a resource for new professionals, including graduate students in mental health, as well as more seasoned clinicians planning to integrate group psychotherapy into their work. Bringing together pre-eminent group psychotherapists from different theoretical perspectives and countries, the articles in this volume present their approaches to conducting groups with diverse populations in different settings. Written in straightforward, jargon-free language, the articles directly speak to the needs of the mental health professional planning to begin a group or to strengthen an existing group. Whether combined with a formal class in group techniques, human relations, or group dynamics, or in an institute training group practitioners, or read as part of one's own professional development, this work is likely to advance the reader's clinical competency and strengthen their self-confidence as a leader. Using a personal style and speaking from years of

experience, the contributors provide hands-on suggestions as to how a group leader really works. From determining patient or client needs, developing treatment goals, and constructing a group, to handling emergencies, the contributors address the needs of the new group leader. The articles also address issues of diversity and globalism, as well as trauma and

resiliency, making this a truly post-9/11 contribution. *L'Espresso* Univ of California Press When civil war erupts in Somalia, cousins Domenica Axad and Barni are separated and forced to flee the country. Barni manages to eke out a living in Rome, where she works as an obstetrician. Domenica wanders Europe in a painful attempt to reunite her

broken family and come to terms with her past. After ten years, the two women reunite. When Domenica gives birth to a son, Barni, also known as Little Mother, is at her side. Together with the new baby, Domenica and Barni find their Somali roots and start to heal the pain they have suffered in war and exile. This powerful yet tender novel underscores the strength of women, family, and community, and draws on

the tenacious yearning for a homeland that has been denied.

The English-language debut of a master stylist: a compassionate but relentless novel about the long, dark harvest of Brazil's totalitarian rule. A professor prepares to retire—Gustavo is set to move from Sao Paulo to the countryside,

but it isn't the urban violence he's fleeing: what he fears most is the violence of his memory. But as he sorts out his papers, the ghosts arrive in full force. He was arrested in 1970 with his brother-in-law Armando: both were vicariously tortured. He was eventually released; Armando was killed. No one is certain that he didn't turn traitor: I didn't talk, he tells himself, yet guilt is his lifelong harvest. I

Didn't Talk pits everyone against the protagonist—especially his own brother. The torture never ends, despite his bones having healed and his teeth having been replaced. And to make matters worse, certain details from his shattered memory don't quite add up... Beatriz Bracher depicts a life where the temperature is lower, there is no music, and much is out of view. I Didn't Talk's pariah's-eye-

view of the forgotten "small" victims powerfully bears witness to their "internal exile." I didn't talk, Gustavo tells himself; and as Bracher honors his endless pain, what burns this tour de force so indelibly in the reader's mind is her intensely controlled voice.

This study of a unique social world probes

beneath the thrill and spectacle of horse racing into the lives of the "honest boys," the "gymps," the "manipulators," the "stoops," and the "Chalk eaters"--the constituents of race track society and the players of the racing game. With scientific precision and journalistic vigor, Scott describes the everyday activities--the objectives and strategies--of those whose lives are organized around track proceedings

and who compete with chance and one another. The players in the racing game range from track owners to stable boys, from law enforcers to lawbreakers, and from casual sportsmen to pathologically addicted gamblers. Considering the self-interests, the normative and operational codes, and the interactional relationships among the major types and subtypes of participants,

the author defines the components of strategic movement within the framework of rules and resources to show how a player's relations to the "means of production" governs his behavior. The fruitful application of sociological theory and method to an unusually interesting social context makes this particularly useful still for courses in social problems and the sociology of

organizations and of leisure. "...when he was teaching at Berkeley, Goffman asked me to come to his seminar to hear a student, Marvin Scott, present his research on horse racing. ...in the course of his presentation, Scott suggested in passing that gamblers, including horse players, sometimes had winning streaks' or losing streaks.' Goffman, who had been listening

appreciatively until that point, interrupted to say that of course Scott meant that they thought they had such streaks of good or bad luck. But Scott said no, these were observable facts.' Goffman, unwilling to accept such supernatural talk, persisted, appealing to the laws of probability to assure Scott that such streaks' were natural occurrences in any long run of tries in such a game as

blackjack or craps."-- Howard Becker Marvin B. Scott retired in 2001 as professor of sociology at Hunter College, City University of New York. He previously taught at San Francisco State College and received his Ph.D. in 1966 at the University of California, Berkeley.
