Our world is teeming with amazing animals of every kind—small and sweet, big and bad, fun, fantastic, freaky, and downright scary! The Giant Book of Animals will give kids a close-up look at many of these, both familiar and unfamiliar, from the huge blue whale to the tiny pink fairy armadillo and dozens of other animals from all around the globe. They'll also get a fanciful glimpse of a few mythical creatures that have only existed in legendary tales, as well as a look at very real animals that are now permanently gone from the planet. Finally, kids will learn about some of the many species that are critically endangered today, giving them their first awareness of how important it is to respect and protect all of Earth's animal life.

*The New International Encyclopædia* Reginald Aster

Still the most popular large snake in the pet world, the boa constrictor of South America is a hardy, beautiful snake that is fairly docile and considered safe when handled properly. In *The Boa Constrictor Manual*, world-renowned herp expert Philippe de Vosjoli has written a concise and useful

guide, well illustrated with color photographs, that offers all of the information a boa keeper needs to maintain a pet snake safely and in the best of health. This *Advanced Vivarium Systems* title includes information about selecting and purchasing a healthy boa constrictor, proper housing and maintenance needs, feeding, and safe handling. Dr. Roger Klingenberg, a herp veterinary specialist, has written a special health chapter on diseases and disorders, with particular emphasis on the dreaded boa AIDS (inclusion body disease or IBD) as well as parasitism, respiratory disease, and more. The chapter concludes with a six-page chart on troubleshooting health concerns, which all boa constrictor keepers will find useful for general upkeep and recognizing and dealing with serious issues. Beyond the husbandry and health of boa constrictors, this book offers an excellent chapter by Jeff Ronne on breeding Colombia boa constrictors, beginning with the size and health of breeding animals and the female's cycling to the birth and care of newborns. Resources and index included.

From cobras and copperheads to pythons and boas, all types of snakes are covered in this book of 40 science experiments, art projects, and games that help budding herpetologists gain a greater appreciation for these slithering reptiles. Activities include making foldable fangs to learn how snakes' teeth and jaws work together; simulating cytotoxic snake venom while making a tasty snack using an everyday enzyme found in pineapple; and mimicking the sound a rattlesnake makes using a rubber band, a paper clip, and an envelope. Engaging, simple, and safe experiments teach kids about the biology of snakes, such as how they use their tongues and nostrils to detect smells, how they are cold-blooded and sensitive to subtle changes in temperature, and how they can detect the slightest vibrations or tremors. Kids do not need a snake for any of the activities and will delight in all the strange snake facts and gross-out projects such as Snake Stink—where they create their own signature stink and test how well it repels potential predators. Did you know... Snakes do not need to be coiled to strike; they can strike from any position, even underwater! Cobras and coachwhips are two of the few snakes that can move in a straight line forward while keeping their upper body raised off the ground Snake venom can actually help humans too: blood pressure medicine was developed from the venom of a Brazilian pit viper, and over 60 other treatments have been created from snake venoms

*Snakes and Such* University of Georgia Press

This easy-to-read text tells exactly why it is that boas and pythons rank among the most popular pet snakes and provides valuable information about selecting and caring for them.

*The New International Encyclopædia* Bellwether Media

Whatever happens he doesn't think it will be easy - and what will Lily do next? A new home, far from earth is a sequel to the free book *Abandoned Far From Earth* and completes the story.

**What's Wrong with My Snake?** Pineapple Press Inc

This book is a collection of essays and anecdotes about 19 animals, 18 birds, 15 fish, 10 reptiles, 31 insects, 39 plants, 17 trees, and 6 other subjects encountered in nature by the author, mostly in the region from West Virginia to Vermont. Hopefully, it lends personality to these subjects and leaves

the reader with a sense of the changing view of our natural world during the 20th century. It is not encyclopedic, being limited to things the author has had experience with. On the other hand, it contains many off-beat details not to be found in other references. Among stone-age peoples, one of the important duties the hunter had to fulfill when he returned home was to tell the other members of his tribe where he had been, what he had seen, and what he had done. That is what the author attempts to do in this book. For instance, he tells of : Dealings with raccoons, both tame and wild. How to rescue a skunk from a storm drain. Home-made animal traps. What constitutes a successful backwoods fox hunt. How kingfishers and sparrow hawks mourn their dead. Why bluebirds are scarce. Why a killdeer will tease a dog. Where to find bluegills in the Ohio River or smelt in the Niagara River. A box turtle's prediction of dry weather and rain. Living where copperheads live. Playing with garter snakes. How to find a bee tree. The very different lives and habits of hornets, brown wasps, and mud dauber wasps. Sleeping with bedbugs. The psychological warfare of the deer fly. When to look for snow fleas. How to recognize chamomile by its aroma. The scarcity of ginseng. Trouble with jack-in-the-pulpit. Using jimson weed to kill flies. The forms and effects of poison ivy.

Why black raspberries grow in smaller patches than red raspberries. Making use of elderberries. How Indians used acorns as food. Growing black walnut trees from seed. There are no pictures in this book. Those would greatly increase the size and &nbs

*Emerald Tree Boas* BowTie Press

Many people have dogs and cats for pets, but do your readers know that some people keep pets like mini horses, boas, and tarantulas? If you've ever considered keeping an unusual pet, these books are for you? Readers will learn the history, the science, and the care needed for keeping fun and exotic pets.

*The Medico-surgical Review and Journal of Practical Medicine*

Did you know that 110 silkworms shook their heads 300,000 times each to produce the silk for a Shabbos tie? In the hands of Rabbi Avrohom Katz (Tuvia Cohen), science is not dry. It is interesting often amusing and he uses it as a window on the wisdom of the Creator. The author is a humorist, a scientist, and an excellent writer. He looks at our everyday world and sees the most unlikely things. Chapter after chapter, the author opens our eyes to a fresh view of the universe.
