This book is intended as a self-study text for students following courses in science and engineering where vectors are used. The material covered and the level of treatment should be sufficient to provide the vector algebra and vector calculus skills required for most honours courses in mechanics, electromagnetism, fluid mechanics, aerodynamics, applied mathematics and mathematical modelling. It is assumed that the student begins with minimal (school-level) skills in algebra, geometry and calculus and has no previous knowledge of vectors. There are brief reviews at appropriate points in the text on elementary mathematical topics: the definition of a function, the derivative of a function, the definite integral and partial differentiation. The text is characterised by short two or three page sections where new concepts, terminologies and skills are introduced, followed by detailed summaries and consolidation in the form of Examples and Problems that test the objectives listed at the beginning of each chapter. Each Example is followed by a fully worked out solution, but the student is well advised to have a go at each Ex. ample before looking at the solution. Many of the Examples and Problems are set in the context of mechanics and electromagnetism but no significant previous knowledge of these subjects is assumed. Bare answers to selected Problems are given at the back of the book. Full solutions to all Problems can be found on [www at http://physics.open.ukl-avdurranlvectors.html](http://physics.open.ukl-avdurranlvectors.html).

The entire focus of Maths Friend is to help students improve their grade at GCSE. Author Chris Robinson can't promise that his guide will turn you into a maths genius, but what he knows it will do

is help students make the most of their talents. Maths Friend does not pretend that maths is fun. "I know from tutoring that many students believe maths is just an instrument of torture invented by schools and by examiners!" admits Chris. Maths Friend fills in gaps left by the textbook and the revision guide, and at times gives a different way of looking at things than the one normally given in class. Much of the book is directed to answering exam questions. Chris shows how the examiner takes the maths you learn and twists it around to make it look unusual. Stay calm, read this book and see through the examiner's tricks. We all make silly mistakes, especially under exam pressure. If there is time, checking your work is vital, but it's not easy to do properly. This book will help the student make those checks. The most common errors are laid out in a spot-the-blunder section. Here, extra marks can be gained for no extra maths knowledge and that can make all the difference to the final grade. Maths Friend also covers aspects that textbooks do not deal with, that won't be found in revision guides or online help, and that teachers have not got the time to cover. Maths Friend is a must-have guide for pupils aged 14-16 studying for their maths GCSE.
