This book gives social and human services students and professionals the opportunity to begin developing cross-cultural communication skills in the English language. The need to be able to communicate in English is becoming more and more obvious. Social workers and other human services professionals will be working with immigrants from countries where English is the official language or at least a second language (Nigeria, Ghana, The Gambia, etc). The growing numbers of English-speaking immigrants are impacting the human services fields of medicine, mental health, social work, the education systems and the legal systems all over Europe. This book is based on the European Common Framework but goes beyond a typical English language text. It focuses on the various skill sets necessary for human services professionals, including important text analysis skills as well as analytical case skills. "Soft skills" such as interpersonal skills and expressing empathy are also presented for student reflection. Students learn the principles of cross-cultural communication through Cross-Cultural Text Analysis which helps them improve their English as they develop cross-cultural awareness, sensitivity and communication skills. Students experience different cultural-linguistic contexts where they can appreciate the dynamic relationship between culture and language applied to the field of human services. For many this book will be the first step in beginning a lifetime adventure of becoming cross-cultural.

This volume presents a systematic approach to developing advanced English language competence at tertiary level. It includes the reflections of experienced language teachers and teacher-researchers in the English Language Competence programme at the University of Vienna and provides examples of good practice, amalgamating teaching expertise and research with aspects of curriculum design and programme management. The book addresses a growing academic and professional interest in understanding advanced language learning and use. To date, research has tended to investigate advanced proficiency from a specific theoretical viewpoint, for example cognition, psycholinguistic processing strategies, or the assumption of a critical period or the age

factor. In contrast, this work examines advanced proficiency from a curricular and instructional perspective by providing a profile of advanced-level language development in a specific institutional context. It brings together three areas of language education: curriculum design, pedagogical practice, and research. Within this triangle, advanced English language education is the focus or, conversely, advanced English language education provides the lens through which links between curriculum design, teaching, and research can be established.

NATIONAL BESTSELLER • For anyone who wants to learn a foreign language, this is the method that will finally make the words stick. “A brilliant and thoroughly modern guide to learning new languages.”—Gary Marcus, cognitive psychologist and author of the New York Times bestseller *Gitars Zero* At thirty years old, Gabriel Wyner speaks six languages fluently. He didn’t learn them in school—who does? Rather, he learned them in the past few years, working on his own and practicing on the subway, using simple techniques and free online resources—and here he wants to show others what he’s discovered. Starting with pronunciation, you’ll learn how to rewire your ears and turn foreign sounds into familiar sounds. You’ll retrain your tongue to produce those sounds accurately, using tricks from opera singers and actors. Next, you’ll begin to tackle words, and connect sounds and spellings to imagery rather than translations, which will enable you to think in a foreign language. And with the help of sophisticated spaced-repetition techniques, you’ll be able to memorize hundreds of words a month in minutes every day. This is brain hacking at its most exciting, taking what we know about neuroscience and linguistics and using it to create the most efficient and enjoyable way to learn a foreign language in the spare minutes of your day.

Forget the 10,000 hour rule— what if it's possible to learn the basics of any new skill in 20 hours or less? Take a moment to consider how many things you want to learn to do. What's on your list?

What's holding you back from getting started? Are you worried about the time and effort it takes to acquire new skills—time you don't have and effort you can't spare? Research suggests it takes

10,000 hours to develop a new skill. In this nonstop world when will you ever find that much time and energy? To make matters worse, the early hours of practicing something new are always the

most frustrating. That's why it's difficult to learn how to speak a new language, play an instrument, hit a golf ball, or shoot great photos. It's so much easier to watch TV or surf the web . . . In The First

20 Hours, Josh Kaufman offers a systematic approach to rapid skill acquisition— how to learn any new skill as quickly as possible. His method shows you how to deconstruct complex skills, maximize

productive practice, and remove common learning barriers. By completing just 20 hours of focused, deliberate practice you'll go from knowing absolutely nothing to performing noticeably well.

Kaufman personally field-tested the methods in this book. You'll have a front row seat as he develops a personal yoga practice, writes his own web-based computer programs, teaches himself

to touch type on a nonstandard keyboard, explores the oldest and most complex board game in history, picks up the ukulele, and learns how to windsurf. Here are a few of the simple techniques he

teaches: Define your target performance level: Figure out what your desired level of skill looks like, what you're trying to achieve, and what you'll be able to do when you're done. The more specific,

the better. Deconstruct the skill: Most of the things we think of as skills are actually bundles of smaller subskills. If you break down the subcomponents, it's easier to figure out which ones are

most important and practice those first. Eliminate barriers to practice: Removing common distractions and unnecessary effort makes it much easier to sit down and focus on deliberate

practice. Create fast feedback loops: Getting accurate, real-time information about how well you're performing during practice makes it much easier to improve. Whether you want to paint a portrait,

launch a start-up, fly an airplane, or juggle flaming chainsaws, The First 20 Hours will help you pick up the basics of any skill in record time . . . and have more fun along the way.
