 This book
 constitutes a
 pioneering
 and unique
 work on Lake
 Victoria. It is
 the world's
 second largest
 fresh-water
 lake and
 supports the
 livelihood of
 more than 30
 million people.
 Surprisingly,
 there has
 been no
 comprehensive
 book
 addressing its
 problems and
 potentials.
 Ecology,

environmental
 pollution and
 resource
 management
 are some of
 the issues
 addressed by
 this
 comprehensive
 insight into
 the
 limitations,
 challenges
 and
 opportunities
 facing Lake
 Victoria.

 E-learning and
 the virtual
 university are
 examples of
 the use of
 information
 and
 communication
 technology

(ICT) as a
 teaching and
 learning
 approach and
 an
 organizational
 structure.
 Both raise
 issues
 associated
 with the
 phenomenon
 of cross-
 border
 education.
 This
 publication
 explores the
 related ICT
 policy,
 planning and
 management
 implications of
 several new or
 reorganized
 institutions of
 higher
 education.
 Three
 background
 chapters
 describe the

context - the trends and challenges and the impact of cross-border education. Eight case studies from different regions and representing various institutional models tell the story of their development and relate what they have learned.

Human Adaptability Past, Present, and Future

JHU Press Fountain of Knowledge: History of the University of Nairobi

1952-2020 follows the development of the University from its origins as the Royal Technical College in 1952, to the

World Class University it has become in 2020. As the 'mother' university in Kenya, its history also provides a narrative of the evolution of university education in Kenya over the same period. Major events, activities and policies changes that have shaped university education are presented in the context of the University of Nairobi's growth. Throughout the text, a large collection of

<p>photographs brings to life the development of the university over the past 68 years. <i>The Status of Student Involvement in University Governance in Kenya</i> African Books Collective The world's most comprehensive, well documented, and well illustrated book on this subject. With extensive subject and geographical index. 30 photographs and illustrations -</p>	<p>mostly color. Free of charge in digital PDF format. <u>Kenyan Public Universities in the Age of Internationalization</u> Springer Science & Business Media This book examines the concept of the democratization of governance in universities in Kenya with particular emphasis on students involvement in governance processes and decision making. Data were collected from members of the student community</p>	<p>utilizing a structured self-administered questionnaire and from purposively selected key informants and focus group discussants drawn from Kenyatta University (representing the public sector) and the United States International University (representing the private sector). The guiding argument for the study was that shared governance, one of the principles of</p>
---	--	--

good governance, is critical in enabling the universities to deliver their visions and the missions effectively. The results revealed that while in principle, Kenyan universities have embraced democratic governance in which all stakeholders, including students, have a role to play, in practice they continue to violate the core principles of good governance, particularly shared

governance. Specifically, students, who are major stakeholders in university education, are largely excluded from significant structures of governance thereby limiting their influence and participation. Although their representation is mainly provided via student self-governance organs (unions, associations and/or councils), their effectiveness is undermined considerably by the lack of trust and

confidence of the student body and the unending manipulation by top university administrators and external political actors. Student active involvement in decision making is mainly confined to lower levels such as the school/faculty and departmental/programme. The authors call for a paradigm shift in the involvement of students in the governance of universities in

ways that discourage the current culture of tokenism and political correctness that characterizes public and private universities in Kenya.

In the past 20 years micronutrients have assumed great public health importance and a considerable amount of research has lead to increasing knowledge of

their physiological role. Because it is a rapidly developing field, the WHO and FAO convened an Expert Consultation to evaluate the current state of knowledge. It had three main tasks: to review the full scope of vitamin and minerals requirements; to draft and adopt a report which would provide recommended nutrient intakes for vitamins A, C, D, E, and K; the B vitamins;

calcium; iron; magnesium; zinc; selenium; and iodine; to identify key issues for future research and make preliminary recommendations for the handbook. This report contains the outcome of the Consultation, combined with up-to-date evidence that has since become available. *Living Wages Around the World* National Academies Press The book illuminates

the national imperatives and institutional level choices African IHEs must contend with in their efforts to carve their niche on a global stage. It is a great addition to the field of comparative international education which has traditionally been dominated by the experiences of IHEs in the developed world. *Trends & the Future of University Education in Kenya* Ohio

State University Press This volume is the newest release in the authoritative series issued by the National Academy of Sciences on dietary reference intakes (DRIs). This series provides recommended intakes, such as Recommended Dietary Allowances (RDAs), for use in planning nutritionally adequate diets for individuals based on age and gender. In

addition, a new reference intake, the Tolerable Upper Intake Level (UL), has also been established to assist an individual in knowing how much is "too much" of a nutrient. Based on the Institute of Medicine's review of the scientific literature regarding dietary micronutrients, recommendations have been formulated regarding vitamins A and K, iron, iodine, chromium,

<p>copper, manganese, molybdenum, zinc, and other potentially beneficial trace elements such as boron to determine the roles, if any, they play in health. The book also: Reviews selected components of food that may influence the bioavailability of these compounds. Develops estimates of dietary intake of these compounds that are compatible with good</p>	<p>nutrition throughout the life span and that may decrease risk of chronic disease where data indicate they play a role. Determines Tolerable Upper Intake levels for each nutrient reviewed where adequate scientific data are available in specific population subgroups. Identifies research needed to improve knowledge of the role of these micronutrients in human</p>	<p>health. This book will be important to professionals in nutrition research and education. <u>Public & Private Universities in Kenya</u> CODESRIA The delivery of quality education to students relies heavily on the actions of an institution's administrative staff. Effective leadership strategies allow for the continued progress of modern educational initiatives. It is crucial to investigate how effective</p>
--	---	--

administrators lead their organizations in challenging and difficult times and promote the accomplishments of their organization. Research Anthology on Preparing School Administrators to Lead Quality Education Programs is a vital reference source that offers theoretical and pedagogical research concerning the management of educational systems on both the

national and international scale. It also explores academic administration as well as administrative effectiveness in achieving organizational goals. Highlighting a range of topics such as strategic planning, human resources, and school culture, this multi-volume book is ideally designed for educators, administrators, principals, superintendents, board members, researchers, academicians,

policymakers, and students.
Decolonization & Independence in Kenya, 1940-93
 African Minds
 This manual describes a new methodology to measure a decent but basic standard of living in different countries and how much workers need to earn to afford this, making it possible for researchers to estimate comparable living wages around the world and determine gaps between

living wages and prevailing wages, even in countries with limited secondary data.

Privatisation and Private Higher Education in Kenya. Implications for Access, Equity and Knowledge Production

IGI Global
FAO provides countries with technical support to conduct nutrition assessments, in particular to build the evidence base required for countries to achieve commitments

made at the Second International Conference on Nutrition (ICN2) and under the 2016-2025 UN Decade of Action on Nutrition. Such concrete evidence can only derive from precise and valid measures of what people eat and drink. There is a wide range of dietary assessment methods available to measure food and nutrient intakes (expressed as energy insufficiency, diet quality

and food patterns etc.) in diet and nutrition surveys, in impact surveys, and in monitoring and evaluation. Different indicators can be selected according to a study's objectives, sample population, costs and required precision. In low capacity settings, a number of other issues should be considered (e.g. availability of food composition tables,

cultural and community specific issues, such as intra-household distribution of foods and eating from shared plates, etc.). This manual aims to signpost for the users the best way to measure food and nutrient intakes and to enhance their understanding of the key features, strengths and limitations of various methods. It also highlights a number of common methodological considerations

involved in the selection process. Target audience comprises of individuals (policy-makers, programme managers, educators, health professionals including dietitians and nutritionists, field workers and researchers) involved in national surveys, programme planning and monitoring and evaluation in low capacity settings, as well as those in charge of

knowledge brokering for policy-making. *Vitamin and Mineral Requirements in Human Nutrition* Anyange Press Scholars and students engaged in overseas research projects often spend much of their time worrying about mundane details never reported in published research. In fact, the quality of scholarship often depends on the researcher's ability to navigate a

bewildering array of social, financial, bureaucratic, and logistical obstacles encountered in preparing for, working in, and recovering from "the field." Overseas Research: A Practical Guide is the first book designed explicitly to prepare scholars and professionals for the real-life challenges of living and working abroad. Opening with a discussion of site selection and project

funding, the authors advise researchers on preparing for departure, setting up residence in the field, conducting research in an unfamiliar environment, employing field assistants, and organizing for and adjusting to the return home. The text is supplemented with the insights, anecdotes, and tips from more than sixty scholars in a wide variety of disciplines who

conducted research in more than forty countries. *Nutrition Abstracts and Reviews* Ann Arbor, Mich. : University Microfilms International Based on careful analysis of burden of disease and the costs of interventions, this second edition of 'Disease Control Priorities in Developing Countries, 2nd edition' highlights achievable priorities; measures progress

d providing efficient, equitable care; promotes cost-effective interventions to targeted populations; and encourages integrated efforts to optimize health. Nearly 500 experts - scientists, epidemiologists, health economists, academicians, and public health practitioners - from around the world contributed to the data sources and methodologies, and

identified challenges and priorities, resulting in this integrated, comprehensive reference volume on the state of health in developing countries.

Dietary assessment

World Bank Publications Adaptation and adaptability are central issues in human population biology and biological anthropology. They are the processes by which relationships between humans and

their environments are established and maintained. This volume charts developments in the study of human adaptation and adaptability at the population level in both theoretical and methodological terms. It represents a unique evaluation by the leading researchers in the field, offers a unique review of adaptability studies, and it identifies future

directions for the study of human population biology in a changing world .

World Bank Publications
Reviews the history of higher education in Kenya and details the emergence of private universities, most of them with a Christian religious orientation, as major players in the provision of tertiary-level education.

Un-Silicon Valley
Lexington Books

This book addresses the implications of this development in Kenya, with regard to the responsiveness of private higher education to issues of broadening access, equity and the traditional research function of universities.

Vice-Chancellors' Regional Workshop on Strategic Planning and Resources Management for Universities
International Potato Center Universities

and economic development in Africa: Pact, academic core and coordination draws together evidence and synthesises the findings from eight African case studies. The three key findings presented in this report are as follows: 1. There is a lack of clarity and agreement (pact) about a development model and the role of higher education in development, at both national and institutional levels. There

is, however, an increasing awareness, particularly at government level, of the importance of universities in the global context of the knowledge economy. 2. Research production at the eight African universities is not strong enough to enable them to build on their traditional undergraduate teaching roles and make a sustained contribution to development via new knowledge production. A number of universities have manageable student-staff ratios and adequately qualified staff, but inadequate funds for staff to engage in research. In addition, the incentive regimes do not support knowledge production. 3. In none of the countries in the sample is there a coordinated effort between government, external stakeholders and the university to systematically strengthen the contribution that the university can make to development. While at each of the universities there are exemplary development projects that connect strongly to external stakeholders and strengthen the academic core, the challenge is how to increase the number of these projects. The project on which this report is based forms part of a larger study

on Higher Education and Economic Development in Africa, undertaken by the Higher Education Research and Advocacy Network in Africa (HERANA). HERANA is coordinated by the Centre for Higher Education Transformation in South Africa. *State of University Education in Kenya* Edward Elgar Publishing Expanding Tertiary education with quality, relevance and

equity is one of the most decisive challenges for Kenya's future, including the achievement of the ideals of the 2010 Constitution and, especially, its 2030 vision, which aims at transforming Kenya into a "newly industrializing, middle income, globally competitive and prosperous country?". That is because tertiary education can contribute in a critical

manner to successfully overcome several of the country's challenges. This book provide analysis and policy recommendations to Government of Kenya, tertiary education leaders and the many stakeholders on managing the massive tertiary education expansion facing the country. This book, first, discusses the motivation for the analysis and its choice of three

critical topics:	financing.	and, third, it
quality and	Secondly, it	ends with a
relevance;	reviews	set of policy
governance,	findings on	recommendati
and student	each area,	ons.
